

DBL 5015

COMPANDOR

The DBL5015 is an noise reduction IC for cordless phone. It is a compandor IC that consist of a compressor and an expander. Compandor reduces transmission noise. by compressing and transmitting outgoing signals and expanding received signals.

The ICs are designed for minimum requirement of external components and for low voltage operation.

Small size is an advantage when used in equipment in which space is a premium. For DATA, input and output terminals are provided for convenience.

Two styles of pockaging, DIP and SOP, are available to meet different reguriements.

□ FEATURES

- Low voltage operation $V_{opr.} = 2.4 \sim 7.0V$
- Low current consumption $I_{cc} = 4mA (V_{cc} = 3V)$
- Microphone amplifier used in compressor
- Has data input output terminals
- Has a buffer amplifier for filter
- Mute can be set up independently
- Through Funtions
- Built in limiter (for compressor)

□ MAXIMUM RATINGS ($T_a = 25^\circ C$)

Characteristic	Symbol	Rating	Unit
Maximum Supply Voltage	V_{cc}	10	V
Power Dissipations	P_D	1000(D) note 1	mW
		410(S) note2	
Operating Temperature Range	T_{opr}	$-20 \sim 70$	$^\circ C$
Storage Temperature Range	T_{sto}	$-55 \sim 150$	$^\circ C$

* note 1. Above $T_a = +25^\circ C$, derate at 8mW/

2. Above $T_a = +25^\circ C$, derate at 3.3mW/
