

AN6876

5-Dot LED Driver Circuit

■ Outline

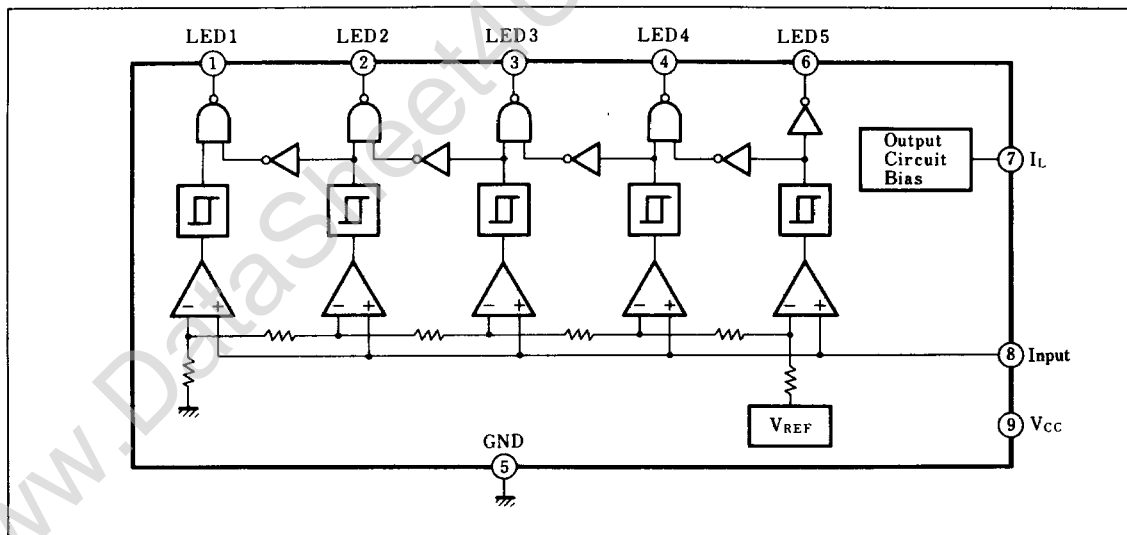

The AN6876 is an integrated circuit designed for driving 5-dot LED so that LED may light linearly for input signal. Because the adjust pin for output current is provided, the brightness of LED can be controlled.

■ Features

- 5-LED bar graph or dot display drive
- Linear response with respect to input
- Brightness externally adjustable
- High output current, suitable for green LED drive
- Lamp ON/OFF hysteresis, no flickering by noise

■ Application Circuit

1. Bar Display

Note) When the voltage of Pin ⑥ is high for 5-dot LED ON, insert the resistor into the anode of LED, to reduce P_D.

2. Dot Display
