Fuji Electric Co.,Ltd.

DWG.NO.

MS5D1437

# 1. SCOPE

This specification provides the ratings and the test requirement for FUJI SILICON DIODE YG963S6R

# 2. Application

PFC circuit(current continuous mode)

This diode is a product which optimizes the diode characteristic for the PFC circuit. This product is a product by which the trr characteristic was valued more than VF though there is a relation of the trade-off up to VF and Trr. The total loss of the PFC circuit can be suppressed by shortening trr.

# 3. OUT VIEW, MARKING, MOLDING RESIN, CHARACTERISTICS

(1) Out view is shown

MS5D1437 9/12

(2) Marking is shown

MS5D1437 9/12

It is marked to type name or abbreviated type name, polarity and Lot No.

(3) Molding resin

Epoxy resin

UL:V-0

(4) Characteristics is shown

MS5D1437 10/12~12/12

# 4. RATINGS

## 4.1 MAXIMUM RATINGS

| ITEM                                | SYMBOL    | CONDITIONS                     | RATINGS    | UNITS |
|-------------------------------------|-----------|--------------------------------|------------|-------|
| Repetitive peak reverse voltage     | VRRM      |                                | 600        | V     |
| Non-repetitive peak reverse voltage | $V_{RSM}$ |                                | 600        | V     |
| Isolating voltage                   | Viso      | Terminals-to-Case,AC.1min      | 1500       | V     |
| Surge peak forward current          | lps       | tw 200ns                       | 20         | А     |
| Peak forward current                | lp        |                                | 15         | А     |
| Average output current              | lo        | Square wave duty =1/2 Tc = 103 | 5          | А     |
| Non-repetitive surge current        | IFSM      | Sine wave, 10ms                | 40         | А     |
| Operating junction temperature      | Tj        |                                | 150        | °C    |
| Storage temperature                 | Tstg      |                                | -40~ + 150 | °C    |

4.2 ELECTRICAL CHARACTERISTICS (at Ta=25 unless otherwise specified.)

| ITEM                          | SYMBOL          | CONDITIONS                             | MA   | XIMUM | UNITS |
|-------------------------------|-----------------|--|------|-------|-------|
| Reverse recovery peak current | I <sub>RP</sub> | I=5A,-di/dt=200A/ μs,VR=380V Tj=100    | Тур. | 2.5   | Α     |
| Reverse recovery time         | trr             | IF=0.1A,I <sub>R</sub> =0.2,Irec=0.05A | Max. | 30.0  | ns    |
| Forward voltage               | VF              | IF= 15 A                               | Max. | 5.0   | V     |
| Reverse current               | lR              | VR = VRRM                              | Max. | 50.0  | μΑ    |
| Thermal resistance            | Rth(j-c)        | Junction to case                       | Max. | 3.5   | °C/W  |

# 4.3 MECHANICAL CHARACTERISTICS

| Mounting torque  | Recommended torque | 0.3 ~ 0.5 | N∙m |

## 6.Cautions

- · Although Fuji Electric is continually improving product quality and reliability, a small percentage of semiconductor products may become faulty. When using Fuji Electric semiconductor products in your are requested to take adequate safety measures to prevent the equipment from causing physical injury, fire, or other problem in case any of the products fail. It is recommended to make your design fail-safe, flame retardant, and free of malfunction.
- •The products described in this Specification are intended for use in the following electronic and electrical equipment which has normal reliability requirements.
- · Computers · OA equipment · Communications equipment(Terminal devices)
- · Measurement equipment
- · Machine tools
- · AV equipment
- · Electrical home appliances · Personal equipment etc.
- · Industrial robots
- The products described in this Specification are not designed or manufactured tobe used in equipment or systems used under life-threatening situations. If you are considering using these products in the equipment listed below first check the system construction and required reliability.
- ·Transportation equipment(automobiles, trains, ships, etc.)
- ·Backbone network equipment

- ·Traffic-signal control equipment
- ·Gas alarms, leakage gas auto breakers
- ·Submarine repeater equipment
- ·Burglar alarms, fire alarms, emergency equipment
- · Medical equipment

· Nuclear control equipment etc.

Do not use the products in this Specification for equipment requiring strict reliability such as(but not limited to):

· Aerospace equipment · Aeronautical equipment

# 7.Warnings

- ·The Diodes should be used in products within their absolute maximaum rating(vltage, current, temperature.etc.). The Diodes may be destroyed if used beyond the rating.
- •The equipment containing Diodes should have adequate fuses or protection to prevent the equipment from causing secondary destruction.
- ·Use the Diodes within their reliability and lifetime under certain environments or conditions. The Diodes may fail before the target lifetime of your products if used under certain reliability
- ·You must design the Diodes to be operated within the specified maximum ratings(voltage, current.temperature.etc.)toprevent possible failure or destruction of devices.
- · Consider the possible temperature rise not only for the junction and case, but also for the
- · Do not directly touch the leads or package of the Diodes while power is supplied or during operation, to avoid electric shock and burns.

- The Diodes are made of incombustible material. However, if a Diode fails, it may emit smoke of flame. Also, operating the Diodes near any flammable place or material may cause the Diodes to emit smoke or flame in case the Diodes become even hotter during operation. Design the arrangement to prevent the spread of fire.
- The Diodes should not used in an environment in the presence of acid,organic matter,or corrosive gas(hydrogen sulfide,sulfurous acid gas.)
- The Diodes should not used in an irradiated field since they are not radiation-proof.

# Insatallation

- · Soldering involves temperatures which exceed the device storage temperature rating. To avoid device damage and to ensure reliability, observe the following guidelines from the quality assurance standard.
- · Solder temperature and duration(through-hole package)

| Solder      | Duration             |
|-------------|----------------------|
| temperature |                      |
| 260 ± 5     | 10 ± 1second         |
| 350 ± 10    | $3.0 \pm 0.5$ second |

- •The immersion depth of the lead should basically be up to the lead stopper and the distance should be a maximum of 1.5mm from the device.
- ·When flow-soldering take care to avoid immersing the package in the solder bath.
- •Refer to the following torque reference When mounting the device on a heat sink. Excess torque applied to the mounting screw causes damage to the device and weak torque will increase the thermal resistance, both of which conditions may destory the device.

Table 1:Recommended tightening torque

|   | rable 1.1000mmonaca tightering torque |       |                        |  |  |  |
|---|---------------------------------------|-------|------------------------|--|--|--|
|   | Package style                         | Screw | Recommended tightening |  |  |  |
|   |                                       |       | torque                 |  |  |  |
|   | TO-220                                | M3    | 30-50Ncm               |  |  |  |
|   | TO-220F                               |       |                        |  |  |  |
|   | TO-3P                                 | M3    | 40-60Ncm               |  |  |  |
|   | TO-3PF                                |       |                        |  |  |  |
|   | TO-247                                |       |                        |  |  |  |
| Ī | TO-3PL                                | M3    | 60-80Ncm               |  |  |  |

- •The heat sink should have a flatness within  $\pm$  50  $\mu$  m and roughness within 10  $\mu$  m. Also,keep the tightening torque within the limits of this specification.
- · Improper handling may cause isolation breakdown leading to a critical accident.
- ·We recommend the use of thermal compound to optimize the efficiency of heat radiation.It is important to evenly apply the compound and to eliminate any air viods.

# Storage

- •The Diodes must be stored at a standard temperature of 5 to 35 and relative humidity of 45 to 75%. If the storage area is very dry, a humidifier may be required. In such a case, use only deionized water or boiled water, since the chlorine in tap water may corrode the leads.
- The Diodes should not be subjected to rapid changes in temperature to avoid condensation on the suface of the Diodes. Therfore, store the Diodes in a place Where the temperature is steady.
- The Diodes should not be stored on top of each other, since this may cause excessive external force on the case.
- The Diodes should not be stored with the lead terminals remaining unprocessed. Rust may cause presoldered connections to go fail during later processing.
- The Diodes should be stored in antistatic containers or shipping bags.

# 8.Appendix

- ·These products do not contain PBDOs or PBBs.
- •These products, assemblies, or components do not contain any of the above-mentioned substances.

Prohibited substances:

CFCs,halon,carbon tetrachloride,1,1,1-trichloroethane(metyl chloroform)

These products, assemblies, or components are not manufactured using any of the above-mentioned substances.

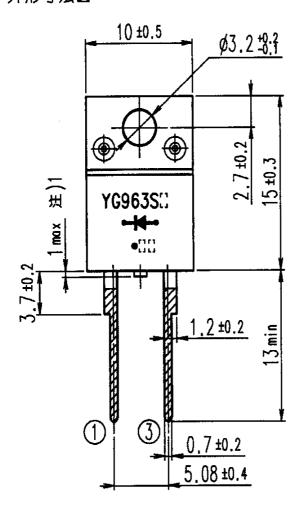

Prohibited substances:

CFCs,halon,carbon tetrachloride,1,1,1-trichloroethane(methyl chloroform)

- ·If you have any questions about any part of this Specification, please contact Fuji Electric or its sales agentbefore using the product
- Neither Fuji nor its agents shall be held liable for any injury caused by using the products not in accordance with the instructions.
- •The application examples described in this specification are merely typical uses of Fuji Electric products.
- This specification does not confer any industrial property rights or other rights, nor constitute a license for such rights.
