RoHS Compliant & Green Package

Proprietary SOF-26 Package

Product Description

Sirenza Microdevices' SZP-3026Z is a high linearity single stage class AB Heterojunction Bipolar Transistor (HBT) amplifier housed in a proprietary surface-mountable plastic encapsulated package. This HBT amplifier is made with InGaP on GaAs device technology and fabricated with MOCVD for an ideal combination of low cost and high reliability.

This product is specifically designed as a flexible final or driver stage for 802.16 equipment in the 2.7-3.8GHz bands. It can run from a 3V to 6V supply. It is prematched to ~5 ohms on the input for broadband performance and ease of matching at the board level. It features an output power detector, on/off power control, ESD protection, excellent overall robustness and a proprietary hand reworkable and thermally enhanced SOF-26 package. This product features a RoHS Compliant and Green package with matte tin finish, designated by the 'Z' suffix.

Pin Out Description

Pin #	Function	Description
1	VBIAS	This is the supply voltage for the active bias circuit.
2	RFIN	This is the RF input pin and has a DC voltage present. An external DC block is required.
3	VPC	Power up/down control pin. The voltage on this pin should never exceed the voltage on pin 3 by more than 0.5V unless the supply current from pin 3 is limited < 10mA.
4	VDET	This is the output port for the power detector. It samples the power at the input of the amplifier.
5	RFOUT/VCC	This is the RF output pin and DC connection to the collector.
6	NC	This pin is not connected internal to the package. Buss it to pin 5 as shown on the app circuit to achieve the specified performance.
GND	GND	These pins are DC connected to the backside paddle. They provide goos thermal connection to the backside paddle for hand soldering and rework. Many thermal and electrical GND vias are recommended as shown in the landing pattern.

Absolute Maximum Ratings

Parameters	Value	Unit
VC1 Collector Bias Current (I_{VC1})	1500	mA
Device Voltage (V_{cc})	7.0	V
Power Dissipation	6	W
Operating Lead Temperature (T_L)	-40 to +85	ºC
Max RF Input Power for 50 ohm output load	27	dBm
Max RF Input Power for 10:1 VSWR output load	23	dBm
Storage Temperature Range	-40 to +150	ºC
Operating Junction Temperature (T_J)	+150	ºC
ESD Human Body Model	500	V

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation the device voltage and current must not exceed the maximum operating values specified in the table on page one.

Bias conditions should also satisfy the following expression:
$I_D V_D < (T_J - T_L) / R_{TH, j-l}$
