AO3700

N-Channel Enhancement Mode Field Effect Transistor with Schottky Diode

General Description

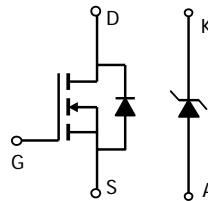

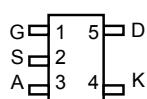

The AO3700 uses advanced trench technology to provide excellent $R_{DS(ON)}$ and low gate charge. A Schottky diode is provided to facilitate the implementation of a bidirectional blocking switch, or for DC-DC conversion applications. Standard Product AO3700 is Pb-free (meets ROHS & Sony 259 specifications). AO3700L is a Green Product ordering option. AO3700 and AO3700L are electrically identical.

A: The value of R_{JJA} is measured with the device mounted on 1 in² FR-4 board with 2oz. Copper, in a still air environment with $T_A=25^\circ\text{C}$. The value in any given application depends on the user's specific board design. The current rating is based on the $t \leq 10\text{s}$ thermal resistance rating.

B: Repetitive rating, pulse width limited by junction temperature.

C. The R_{JJA} is the sum of the thermal impedance from junction to lead R_{JL} and lead to ambient.

D. The static characteristics in Figures 1 to 6 are obtained using 80 μs pulses, duty cycle 0.5% max.

E. These tests are performed with the device mounted on 1 in² FR-4 board with 2oz. Copper, in a still air environment with $T_A=25^\circ\text{C}$. The SOA curve provides a single pulse rating. Rev0: October 2005
