

TENTATIVE TOSHIBA BIPOLAR LINEAR INTEGRATED CIRCUIT SILICON MONOLITHIC

TA1274F

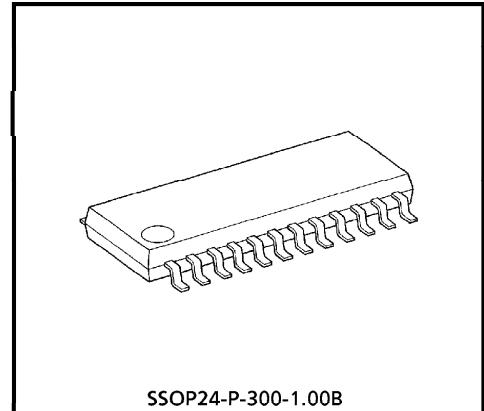

PIF / SIF SYNCHRONOUS DEMODULATOR IC

FEATURES

- Compatible pin assignment to TA1267AF

PIF CIRCUIT

- True synchronous PIF demodulator
- 3-stages gain controlled PIF amplifier
- High speed response PIF AGC detector
- Buzz reducer
- Equalizer for video output
- AFT detector without extra reference circuit

SIF CIRCUIT

- Wide range gain controlled SIF amplifier (control range : 70 [dB] typ.)
- Alignment-free PLL-FM demodulator

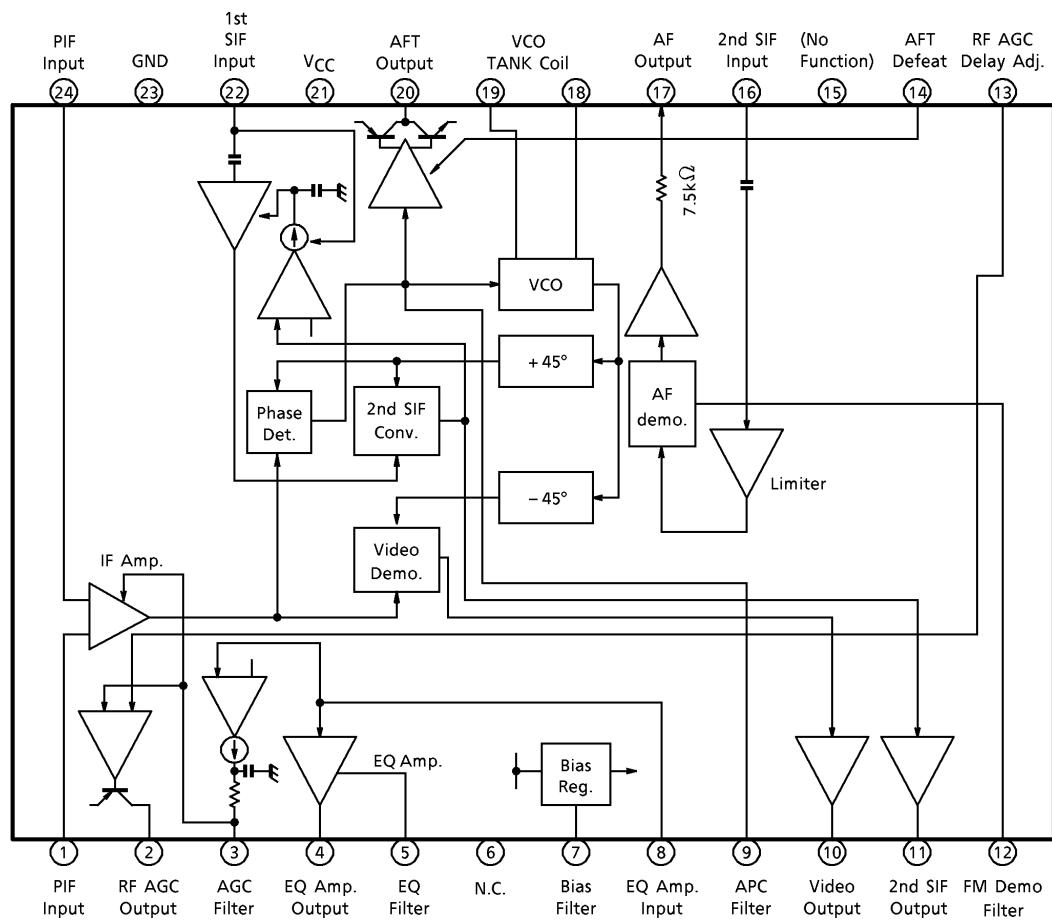

● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury, or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

● The products described in this document are subject to the foreign exchange and foreign trade laws.

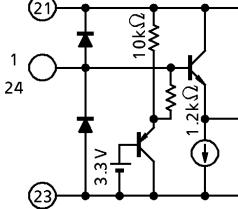

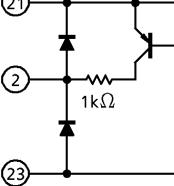

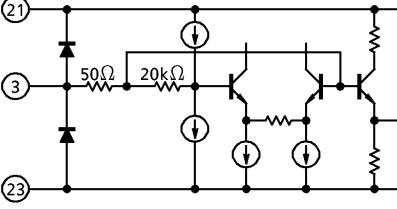

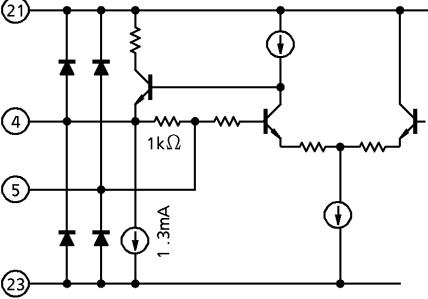

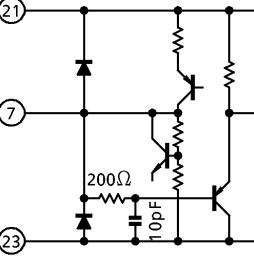

● The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.

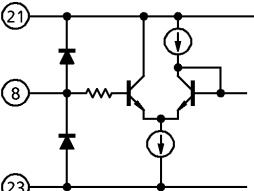

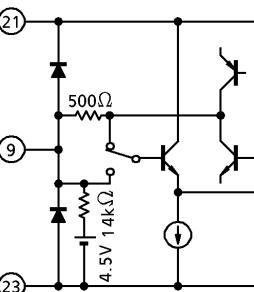

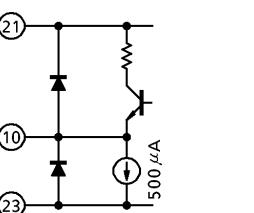

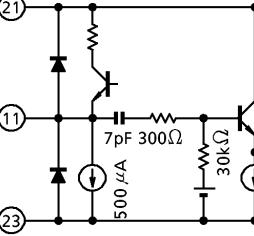

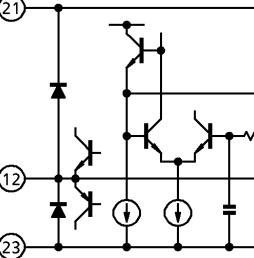

● The information contained herein is subject to change without notice.

BLOCK DIAGRAM

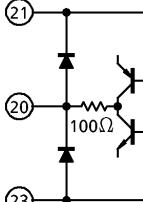

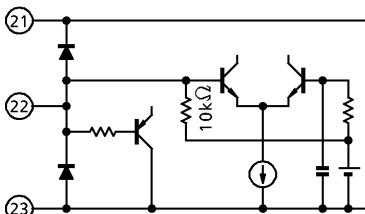

TERMINAL FUNCTION

PIN No.	NAME	FUNCTION	INTERFACE CIRCUIT
1 24	PIF input	Differential type inputs Typical input level is 85 [dB μ V].	
2	RF AGC output	Open collector (PNP) type output. Maximum output current is 0.5 [mA].	
3	AGC filter	Connect a capacitor (0.47μF) between GND.	
4 5	EQ amplifier output EQ filter	No.4 terminal is EQ amplifier output. Maximum output current of this terminal is 5 [mA]. No.5 terminal is for EQ filter.	
6	(No function)	Don't connect any circuit to this terminal.	—
7	Bias filter	Connect a capacitor (10 [μF]) between GND.	

PIN No.	NAME	FUNCTION	INTERFACE CIRCUIT
8	EQ amplifier input	EQ amplifier inputs.	
9	APC filter	Connect a resistor (330 [Ω]) and a capacitor (0.47 [μF]) between GND in series. And connect a capacitor (1000 [pF]) between this terminal and GND. Sensitivity of phase detector is 400 [μA / rad] (Typ.), and sensitivity of VCO is 1.8 [MHz / V] (Typ.).	
10	Video output	Connect a resistor (1 [kΩ]) between GND. Maximum output current is 10 [mA].	
11	2nd SIF output	2nd SIF signal is outputted from this terminal.	
12	FM demodulating filter	Connect a capacitor (2.2 [μF]) between GND.	

PIN No.	NAME	FUNCTION	INTERFACE CIRCUIT
13	RF AGC delay adj.	This terminal is for RF AGC delay point adjustment. 100 [μ A] current is outputted from this terminal. Connect a resister (5.6 [k Ω]) and a volume (10 [k Ω]) between GND in series.	
14	AFT Defeat SW	This terminal is AFT defeat switch. To open this terminal, AFT function is activate. To connect GND this terminal, AFT function is not activate. And terminal No.20 goes to 1/2 V _{CC} .	
15	(No function)	This terminal must be connected to V _{CC} .	—
16	2nd SIF input	This terminal 2nd SIF input. This terminal must be decoupled outer circuit on D.C.	
17	AF output	Output resistance of this terminal is 7.5 [k Ω].	
18 19	VCO tank	Connect tank for VCO between these terminals.	

PIN No.	NAME	FUNCTION	INTERFACE CIRCUIT
20	AFT output	Push-pull type current output. Reverse type AFT.	
21	VCC	Recommended voltage range is 9.0 [V] ± 10 [%].	—
22	SIF input	In use inter-carrier application, connect this terminal to GND. In this condition, the SIF amplifier sets gain minimum.	
23	GND		—

MAXIMUM RATINGS (Ta = 25°C)

CHARACTERISTIC	SYMBOL	RATING	UNIT
Supply Voltage	V _{CC}	13	V
Power Dissipation	P _D max	1040 (Note 1)	mW
Operating Temperature	T _{opr}	-20~75	°C
Storage Temperature	T _{stg}	-55~150	°C

(Note 1) This value is on condition that the IC is mounted on PCB (50mm × 50mm). When using the device at Ta = 25°C, decrease the power dissipation by 8.3mW for each increase of 1°C.

RECOMMENDED SUPPLY VOLTAGE

PIN No.	PIN NAME	MIN.	TYP.	MAX.	UNIT
21	V _{CC}	8.1	9.0	9.9	V
