

Product Description

RFMD's CGA-7718Z is a high performance InGaP HBT MMIC Amplifier. Designed with the InGaP process technology for excellent reliability. A Darlington configuration is utilized for broadband performance. The heterojunction increases breakdown voltage and minimizes leakage current between junctions. The CGA-7718Z contains two amplifiers for use in wideband push-pull CATV amplifiers requiring excellent second order performance. The second and third order non-linearities are greatly improved in the push-pull configuration.

Absolute Maximum Ratings

Parameter	Rating	Unit
Max Device Current (I_D)	300	mA
Max Device Voltage (V_D)	6.0	V
Max RF Input Power	18	dBm
Max Junction Temp (T_J)	150	°C
Operating Temp Range (T_L)	-40 to +85	°C
Max Storage Temp	150	°C
Min Storage Temp	-40	°C

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation, the device voltage and current must not exceed the maximum operating values specified in the table on page one.

Bias Conditions should also satisfy the following expression:

$$I_D V_D < (T_J - T_L) / R_{TH, j-l} \text{ and } T_L = T_{LEAD}$$

Caution! ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

RoHS status based on EU Directive 2002/95/EC (at time of this document revision).

Pin	Function	Description
1	RF IN	RF input pin. External DC-blocking capacitor is required.
2, 3, 6, 7	GND	Connection to ground. Use via holes for best performance to reduce lead inductance as close to ground leads as possible.
4	RF IN	Same as pin 1.
5	RF OUT/VCC	RF output and bias pin (open collector).
8	RF OUT/VCC	Same as pin 5.
EPAD	GND	Exposed area on the bottom side of the package must be soldered to the ground plane of the board for optimum thermal and RF performance. Several vias should be located under the EPAD as shown in the recommended land pattern.
