

Dual Wide Bandwidth Operational Amplifiers

**FEATURES**

- 2.5MHz Unity Gain Bandwidth Guaranteed(PJ4558)
- Internally Compensated
- Short Circuit Protection
- Gain and Phase Match between Amplifiers
- Low Power Consumption

**ORDERING INFORMATION**

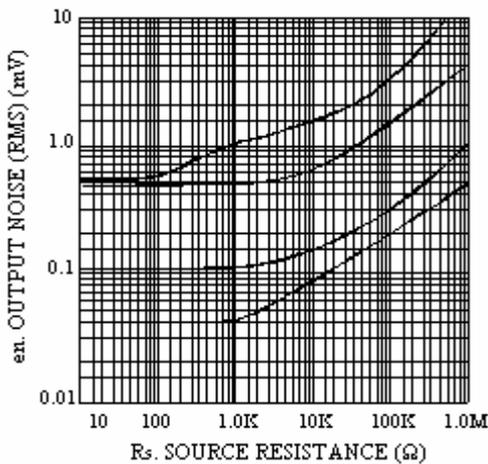

Figure 4. Spectrial Noise Density

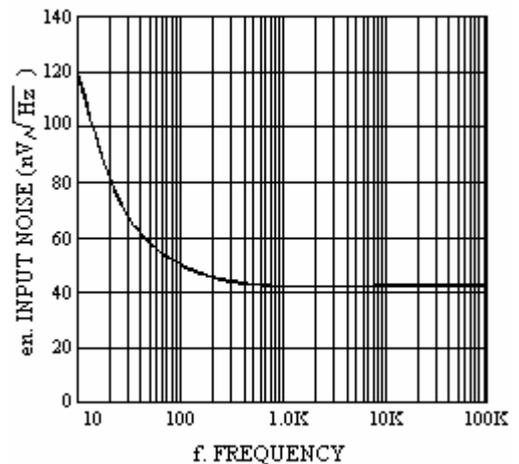

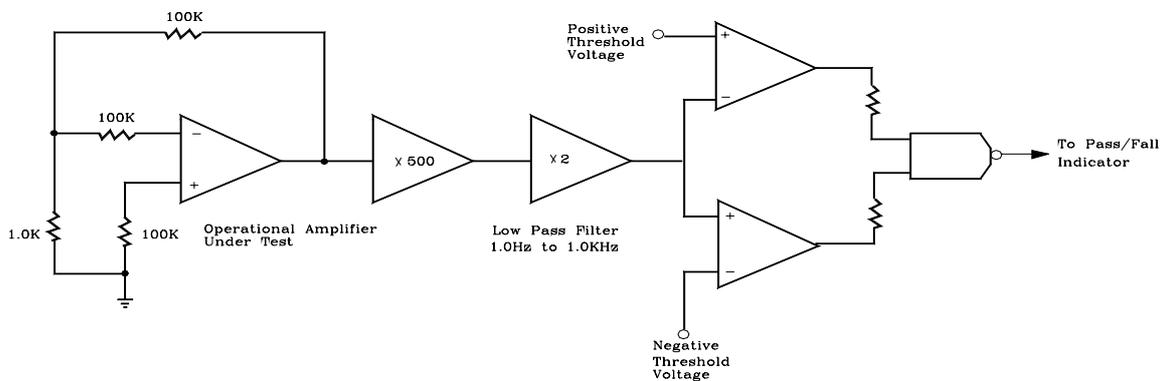

Figure 5. Burse Noise Test Circuit

Unlike conventional peak reading or RMS meters, this system was especially designed to provide the quick response time essential to burst (popcorn) noise testing.

The test time employed is 10 sec and the 20 μV<sub>peak</sub> limit refers to the operational amplifier input thus eliminating errors in the closed loop gain factor of the operational amplifier.
