

MegaMOS FETs

T-39-15

The MegaMOS family of large scale monolithic Power MOSFETs provides significantly higher power handling capability than industry standard MOSFETs. With HDMOS technology, IXYS has increased its chip sizes without a major cost penalty to the user. Unlike the popular size 3, 4 and 5 MOSFETs, IXYS size 6 and 7 MegaMOS MOSFETs are 50% larger in silicon area. These FETs provide two times the ruggedness to unclamped inductive energy and dv/dt while eliminating the complexities and safeguards needed when paralleling smaller MOSFETs.

Lower $R_{DS(ON)}$ and R_{thJC} In The Same Package

Although IXYS MegaMOS FETs are 50% larger, they fit in both the TO-204 (TO-3) and TO-247 industry standard packages. Compared with other MOSFETs, they have half the on-resistance across the voltage spectrum from 80 to 1000 volts. Our size 7 die which has a thermal resistance rating of $0.42^{\circ}\text{C}/\text{watt}$, is capable of handling twice the power of industry standard size 5 MOSFETs. These combined advantages allow for higher current handling and lower power dissipation without requiring a mechanical redesign. They are ideal for off-line forward and flyback converters, vertical and horizontal deflection circuits, radar modular circuits, military power supplies as well as other applications requiring very high voltage.

Low C_{iss} and High Transconductance

HDMOS' unique cell design and process improvements contribute to the MegaMOS family having 50% higher transconductance levels per unit area than competitive designs. They also have input capacitance and reverse transfer capacitance values which are much less than when paralleling two smaller MOSFETs to achieve the same power rating. The designer can simply "plug-in" the MegaMOS FET to get higher power without a major gate circuit redesign.

New Isolated Hi-Rel and Commercial Packages

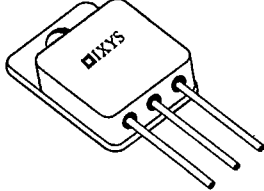

IXYS supplies its MegaMOS family in a number of standard packages with internal isolation for ease of mount-down and higher current handling. MegaMOS FETs are available in the Hi-Rel TO-254 and TO-61 as well as the innovative IXYS "Z-Pac." For commercial applications, the MegaMOS family is available in the rugged TO-238 isolated package, giving IXYS the highest current and power rating available in a single discrete cost-effective package.
