DC-DC Converter

The BusQor BQ55090QEx60 bus converter is a next-generation, board-mountable, isolated, fixed switching frequency dc/dc converter that uses synchronous rectification to achieve extremely high conversion efficiency. The power dissipated by the converter is so low that a heatsink is not required, which saves cost, weight, height, and application effort. The BusQor series provides an isolated step down voltage from 48V to 12 or 9.6V intermediate bus with no regulation in a standard "quarter-brick" module. BusQor converters are ideal for creating the mid-bus voltage required to drive point-of-load (non-isolated) converters in intermediate bus architectures.

## BusQor®

*BQ55090QEx60 Model*

### Protection Features

- Input under-voltage lockout and over-voltage shutdown protects against abnormal input voltages
- Output current limit and short circuit protection (auto recovery)
- Output over-voltage protection
- Thermal shutdown

### Mechanical Features

- Industry standard quarter-brick pin-out configuration
- Size: 1.45" x 2.3" (36.8x58.4mm), height: 0.467" (11.86mm)
- Total open frame weight: 1.5 oz (42 g)

### Control Features

- On/Off control referenced to input side (positive and negative logic options are available)
- Inherent current share (by droop method) for high current and parallel applications.

### Safety Features

- UL 60950-1:2007
- EN60950-1/A11:2009/A1:2010
- CAN/CSA-C22.2 No. 60950-1:2007
- IEC 61000-4-2

### Operational Features

- High efficiency, 96.6% at full rated load current
- Delivers 60A full power with minimal derating - no heatsink required
- Operating input voltage range: 35-55V
- Fixed frequency switching provides predictable EMI
- No minimum load requirement

**Package: Quarter-brick**

### NOTES

- 1) Pins 1-3 are 0.040" (1.02mm) diameter with 0.080" (2.03 mm) diameter standoff shoulders.
- 2) Pins 4-5 are 0.062" (1.57 mm) diameter with 0.100" (2.54 mm) diameter standoff shoulders.
- 3) Other pin lengths available. Recommended pin length is 0.03" (0.76mm) greater than the PCB thickness.
- 4) All Pins: Material - Copper Alloy  
Finish: Matte Tin over Nickel plate
- 5) Undimensioned components are shown for visual reference only.
- 6) All dimensions in inches (mm)  
Tolerances: x.xx +/-0.02 in. (x.x +/-0.5mm)  
x.xxx +/-0.010 in. (x.xx +/-0.25mm)
- 7) Weight: 1.5 oz (42 g) typical
- 8) Workmanship: Meets or exceeds IPC-A-610C Class II
- 9) UL/TUV standards require a clearance of 0.04" (1.02mm) around primary areas of the module.
- 10) The flanged pins are designed to permit surface mount soldering (allowing to avoid the wave soldering process) through the use of the flanged pin-in-paste technique.

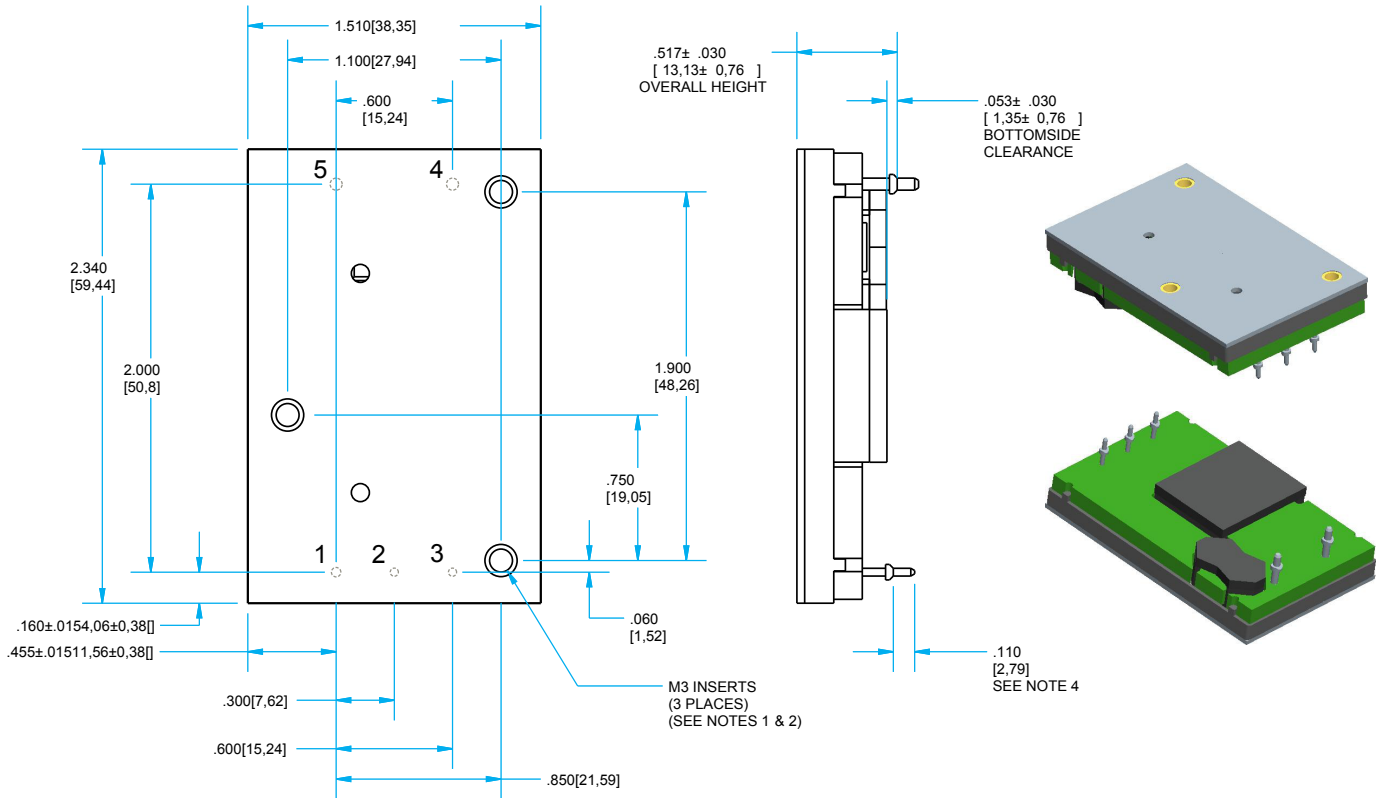

### PIN DESIGNATIONS

Pin	Name	Function
1	Vin(+)	Positive input voltage
2	ON/OFF	Logic control input to turn converter on/off.
3	Vin(-)	Negative input
4	Vout(-)	Negative output
5	Vout(+)	Positive output

# Baseplated Mechanical Diagram

**Input: 35-55V**  
**Output: 9.6V**  
**Current: 60A**  
**Package: Quarter-brick**

### NOTES

### PIN DESIGNATIONS

- 1) M3 screws used to bolt unit's baseplate to other surfaces such as heatsinks must not exceed 0.10" (2.54mm) depth below the surface of the baseplate.
- 2) Applied torque per screw should not exceed 6in-lb (0.7nm)
- 3) Baseplate flatness tolerance is 0.004" (.10mm) TIR for surface
- 4) Other pin extension lengths available
- 5) Pins 1-3 are 0.040" (1.02mm) dia. with 0.080" (2.03mm) dia. standoff shoulders
- 6) Pins 4 and 5 are 0.062" (1.57mm) dia. with 0.100" (2.54mm) dia. standoff shoulders
- 7) All pins: Material: Copper Alloy  
Finish: Matte Tin over Nickel plate
- 8) Undimensioned components are shown for visual reference only
- 9) Weight: 2.7 oz (78 g) typical
- 10) All dimensions in inches(mm)  
Tolerances: x.xx in +/-0.02 (x.xmm +/-0.5mm)  
x.xxx in +/-0.010 (x.xxmm +/-0.25mm)

Pin	Name	Function
1	Vin(+)	Positive input voltage
2	ON/OFF	Logic control input to turn converter on/off.
3	Vin(-)	Negative input
4	Vout(-)	Negative output
5	Vout(+)	Positive output

## BQ55090QEx60 Electrical Characteristics

Ta = 25 °C, airflow rate = 300 LFM, Vin = 48V dc unless otherwise noted; full operating temperature range is -40 °C to +100 °C ambient temperature with appropriate power derating. Specifications subject to change without notice.

Field Demonstrated MTBF				10 <sup>6</sup> Hrs.	See our website for details

Note 1: UL's product certification tests were carried out using 20A fast blow fuse. Fuse interruption characteristics have to be taken into account while designing input traces. User should ensure that Input trace is capable of withstanding fault currents

Note 2: For applications requiring reduced output voltage ripple and noise, consult SynQor applications support (e-mail: support@synqor.com)

Note 3: Isolation capacitance can be added external to the module.

## Technical Specification

**Input: 35-55V**  
**Output: 9.6V**  
**Current: 60A**  
**Package: Quarter-brick**

### Standards Compliance & Qualification Testing

Parameter	Notes & Conditions
<b>STANDARDS COMPLIANCE</b>	
UL 60950-1:2007	Basic insulation
EN60950-1/A11:2009/A1:2010	
CAN/CSA-C22.2 No. 60950-1:2007	
IEC 61000-4-2	ESD test, 8 kV - NP, 15 kV air - NP (Normal Performance)

Note: An external input fuse must always be used to meet these safety requirements. Contact SynQor for official safety certificates on new releases or download from the SynQor website.

Parameter	# Units	Test Conditions
<b>QUALIFICATION TESTING</b>		
Life Test	32	95% rated Vin and load, units at derating point, 1000 hours
Vibration	5	10-55 Hz sweep, 0.060" total excursion, 1 min./sweep, 120 sweeps for 3 axis
Mechanical Shock	5	100g minimum, 2 drops in x, y and z axis
Temperature Cycling	10	-40 °C to 100 °C, unit temp. ramp 15 °C/min., 500 cycles
Power/Thermal Cycling	5	Toperating = min to max, Vin = min to max, full load, 100 cycles
Design Marginality	5	Tmin-10 °C to Tmax+10 °C, 5 °C steps, Vin = min to max, 0-105% load
Humidity	5	85 °C, 85% RH, 1000 hours, continuous Vin applied except 5 min/day
Solderability	15 pins	MIL-STD-883, method 2003

Figure 14: Input Terminal Ripple Current,  $i_c$ , at full rated output current and nominal input voltage with  $10\mu H$  source impedance and  $47\mu F$  electrolytic capacitor (500 mA/div). See Figure 13.

Figure 15: Input reflected ripple current,  $i_s$ , through a  $10\mu H$  source inductor, using a  $47\mu F$  electrolytic input capacitor (50mA/div). See Figure 13.

Figure 16: Output voltage ripple at nominal input voltage and rated load current (100mV/div). Load capacitance:  $1\mu F$  ceramic capacitor and  $15\mu F$  tantalum capacitor. Bandwidth: 20MHz. See Figure 13.

Figure 17: Output voltage vs. load current for different input voltages showing typical current limit curves.

Figure 18: Load current (50A/div) as a function of time when the converter attempts to turn on into a  $1m\Omega$  short circuit. Top trace (500µs/div) is an expansion of the on-time portion of the bottom trace.

### BASIC OPERATION AND FEATURES

With voltages dropping and currents rising, the economics of an Intermediate Bus Architecture (IBA) are becoming more attractive, especially in systems requiring multiple low voltages. IBA systems separate the role of isolation and voltage scaling from regulation and sensing. The BusQor series bus converter provides isolation and an unregulated voltage step down in one compact module, leaving regulation to simpler, less expensive non-isolated converters.

In Figure A below, the BusQor module provides the isolation stage of the IBA system. The isolated bus then distributes power to the non-isolated buck regulators to generate the required voltage levels at the points of load. In this case, the bucks are represented with SynQor's NiQor series of non-isolated DC/DC converters. In many applications requiring multiple low voltage outputs, significant savings can be achieved in board space and overall system costs

When designing an IBA system with bus converters, the designer can select from a variety of bus voltages. While there is no universally ideal bus voltage, most designs employ one of the following: 12V, 9V, 7.5V, 5V, or 3.3V. Higher bus voltages can lead to lower efficiency for the buck regulators but are more efficient for the bus converter and provide lower board level distribution current. Lower bus voltages offer the opposite trade offs.

SynQor's 9.6Vout BusQor module acts as a true dc transformer. The output voltage is proportional to the input voltage, with a specified "turns ratio" or voltage ratio, plus minor drop from the internal resistive losses in the module. When used in IBA systems, the output variation of the BusQor must be in accordance with the input voltage range of the non-isolated converters being employed.

The BusQor architecture is very scalable, meaning multiple bus converters can be connected directly in parallel to allow current sharing for higher power applications.

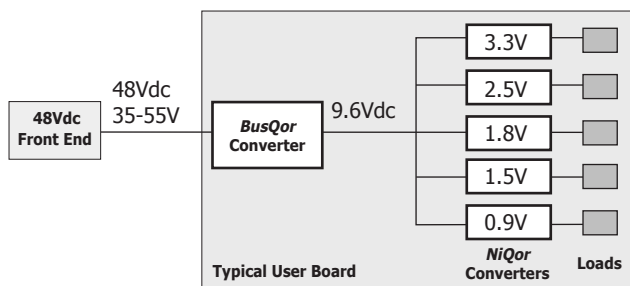

Figure A: Example of Intermediate Bus Architecture using BusQor bus converter and NiQor non-isolated converters

### CONTROL FEATURES

**REMOTE ON/OFF (Pin 2):** The ON/OFF input, Pin 2, permits the user to control when the converter is on or off. This input is referenced to the return terminal of the input bus, Vin(-). There are two versions of the converter that differ by the sense of the logic used for the ON/OFF input.

In the positive logic version, the ON/OFF input is active high (meaning that a high turns the converter on). In the negative logic version, the ON/OFF signal is active low (meaning that a low turns the converter on). Figure B is a detailed look of the internal ON/OFF circuitry.

Figure B: Internal ON/OFF pin circuitry

## PROTECTION FEATURES

**Input Under-Voltage Lockout:** The converter is designed to turn off when the input voltage is too low, helping avoid an input system instability problem, described in more detail in the application note titled "Input System Instability". The lockout circuitry is a comparator with DC hysteresis. When the input voltage is rising, it must exceed the typical Turn-On Voltage Threshold value (listed on the specification page) before the converter will turn on. Once the converter is on, the input voltage must fall below the typical Turn-Off Voltage Threshold value before the converter will turn off. Also see Figure E.

**Output Current Limit:** The output of the BusQor module is electronically protected against output overloads. When an overload current greater than the "DC Current-Limit Inception" specification is drawn from the output, the output shuts down to zero volt in a period of 20ms typical (see Figure D). The shutdown period lasts for a typical period of 200ms (Figure D) after which the BusQor tries to power up again. If the overload persists, the output voltage will go through repeated cycles of shutdown and restart with a duty cycle of 10% (On) and 90% (Off) respectively. The BusQor module returns (auto resetting) to normal operation once the overload is removed. The BusQor is designed to survive in this mode indefinitely without damage and without human intervention.

Figure C: Output Overload protection diagram (not to scale)

Figure D: Output Short Circuit and Auto-Resetting protection diagram (not to scale)

**Output Short Circuit Protection:** When the output of the BusQor module is shorted, a peak current of typically 95 A will flow into the short circuit for a period of about 20ms. The output of the BusQor will shutdown to zero for ~ 200mS (Figure D). At the end of the shutdown period the BusQor module tries to power up again. If the short circuit persists, the output voltage will go through repeated cycles of shutdown and restart with a duty cycle of 10% (On) and 90% (Off) respectively. The BusQor module returns (auto resetting) to normal operation once the short circuit is removed. The BusQor is designed to survive in this mode indefinitely without damage and without human intervention.

In the Auto resetting mode, also referred to as "Hiccup" mode, the power drawn from the 48V input is about 5 Watts, most of which is dissipated into the external fault. It is important that copper traces and pads from the output circuit be designed to withstand the short term peaks, although the average current into the fault may be as low as 10A typical. See Figure 18 for appropriate waveform.

**Over-Temperature Shutdown:** A temperature sensor on the converter senses the average temperature of the module. The thermal shutdown circuit is designed to turn the converter off when the temperature at the sensed location reaches the Over-Temperature Shutdown value. It will allow the converter to turn on again when the temperature of the sensed location falls by the amount of the Over-Temperature Shutdown Restart Hysteresis value.

### APPLICATION CONSIDERATIONS

**Start-Up Inhibit Period:** Figure E details the Start-Up Inhibit Period for the BusQor module. At time  $t_0$ , when  $V_{in}$  is applied with On/Off pin asserted (enabled), the BusQor output begins to build up. Before time  $t_1$ , when the input voltage is below the UVL threshold, the unit is disabled by the Input Under-Voltage Lockout feature. When the input voltage rises above the UVL threshold, the Input Under-Voltage Lockout is released, and a typical Startup Inhibit Period of 12ms is initiated. The output builds up to 90% of the nominal value of 9.6V in a period of 15ms typical (50 % load).

At time  $t_2$ , when the On/Off pin is de-asserted (disabled), the BusQor output instantly drops to 0V. Fall time from 9.6V to 0V is dependent on output capacitance and any parasitic trace inductance in the output load circuit.

At time  $t_3$ , when the On/Off pin is re-asserted (enabled), the BusQor module output begins to build up after the inhibit period of 200 ms typical has elapsed.

Refer to the Control Features section of the data sheet for details on enabling and disabling methods for N and P logic type modules.

**Figure E:** Power Up/Down Diagram (not to scale) showing Start-Up Inhibit Period

**Component Keep Out Area:** Keep out areas for components not referenced to the Primary circuit are shown in shaded areas in Figure F. The keep out areas shown are consistent with UL's requirements for Basic Insulation of 0.04" (40 mils) for Pollution degree 2. User should consult UL standards for other insulation classes and operating environments.

For applications that require mounting parts BELOW the BusQor module, one should be aware of potential high levels of electromagnetic interference, in addition to safety keep out. Users are advised to consult SynQor Applications engineering in such applications.

**Copper Keep Out Area:** Keep out areas shown in Figure F are to be observed for Top layer copper traces and vias. Internal layers buried one or more layers may be exempt, depending on the PCB material grade and thickness. Users are advised to consult UL standards for details.

**Figure F:** Keep Out Areas for BusQor module

All layers including top and bottom, are subject to the keep out areas shown around Primary pins of BusQor module. Actual keep outs along the surface (Creepage) may vary depending on the PCB material CTI. Users are advised to consult UL standards for details.

**Bridging Components:** Bridging components like EMI filter capacitors required to be placed as close as possible to the BusQor module for optimum performance must observe the clearance/creepage requirements of 0.04" (40 mils) between pads to maintain compliance to UL standards for the overall power system.

**Note:** Referenced keep out widths are adequate to withstand UL's Basic Insulation Dielectric strength tests for approved PCB materials. Applications requiring Double or Reinforced insulation must double the keep out widths shown in Figure F. Keep out areas shown have standard margins above UL's minimum requirements.

**Figure G:** Location of Sense Resistor

**Input: 35-55V**  
**Output: 9.6V**  
**Current: 60A**  
**Package: Quarter-brick**

**Output Load Current Calculation:** The BusQor series allows the converter output load to be measured without adding a current loop or external shunt resistor to the designer's PCB board under test. On the top side of the BusQor converter is a current sense resistor as shown in Figure G. The output load current is proportional to the voltage drop across this sense resistor. This calculation is detailed below. A current sense resistor referenced to the primary input is used in the equation below to calculate the output load current.

$$I_{load} = (VR_{sense}(load) - VR_{sense}(no\ load)) \times 2500$$

where:

$$I_{load} = \text{output load current}$$

$VR_{sense}(no\ load)$  = voltage across the sense resistor with converter at zero load

The number 2500 is a "Load Current Scale Factor" for this product, valid only for  $V_{in} = 48V$ . Hence, measurement should be made at this input voltage.

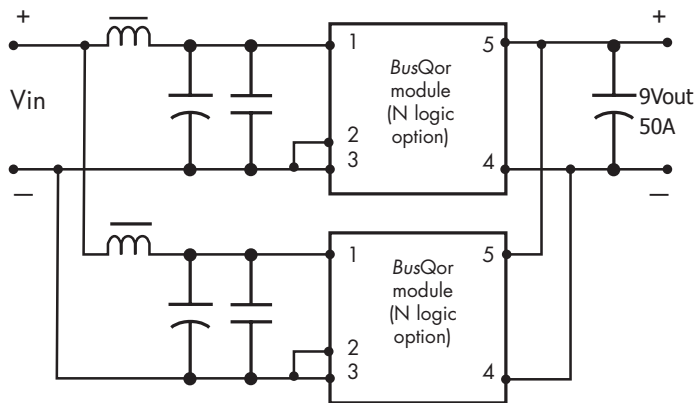

Figure H: BusQor Output Paralleling for increased current output

The voltage drop across the sense resistor is about 24 mV at full load of 60 A. Therefore, proper measuring techniques must be used to ensure accuracy. A calibrated DMM set to 300mV is acceptable. Since this measurement is done on the Primary area of the converter, a slight non-linearity may be observed over the load current range. Measurements should be made at 48 V input voltage. Using the Scale Factor referenced above, the error may be on the order of 4%. For more detailed information consult the application note on SynQor's website titled "Output Load Current Calculations".

Figure I: Current share performance of 2 paralleled modules

**Current Sharing:** BusQor modules are designed to operate in parallel without the use of any external current share circuitry. A typical circuit for paralleling two BusQor modules is shown in Figure H. An output capacitor is recommended across each module and located close to the converter for optimum filtering and noise control performance. Dedicated input inductors are recommended but are considered optional. Input capacitors must be located close to the converter module. PCB layout in the input circuit should be such that high frequency ripple currents of each module is restricted to a loop formed by the input capacitors and the input terminals of the BusQor module. See Figure J for details on PCB layout. Contact SynQor application engineering for further assistance on PCB trace design.

The current share performance of two paralleled modules is illustrated in the graph in Figure I. In this graph the percent deviation from ideal sharing (50%) is plotted for each module versus the total output load current at 48Vin.

Figure J: Recommended PCB layout for input circuit

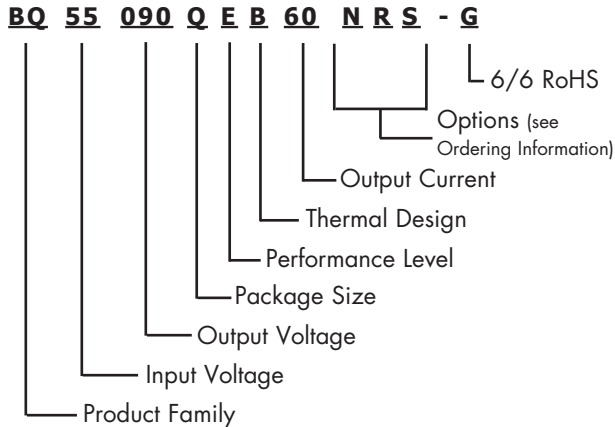

# Ordering Information

**Input: 35-55V**  
**Output: 9.6V**  
**Current: 60A**  
**Package: Quarter-brick**

## Part Numbering System

The part numbering system for SynQor's dc-dc converters follows the format shown in the example below.

The first 12 characters comprise the base part number and the last 3 characters indicate available options. The "-G" suffix indicates 6/6 RoHS compliance.

## Application Notes

A variety of application notes and technical white papers can be downloaded in pdf format from our [website](#).

**RoHS Compliance:** The EU led RoHS (Restriction of Hazardous Substances) Directive bans the use of Lead, Cadmium, Hexavalent Chromium, Mercury, Polybrominated Biphenyls (PBB), and Polybrominated Diphenyl Ether (PBDE) in Electrical and Electronic Equipment. This SynQor product is 6/6 RoHS compliant. For more information please refer to SynQor's RoHS addendum available at our [RoHS Compliance / Lead Free Initiative web page](#) or e-mail us at [rohs@synqor.com](mailto:rohs@synqor.com).

## Contact SynQor for further information:

 USA

## Ordering Information

The tables below show the valid model numbers and ordering options for converters in this product family. When ordering SynQor converters, please ensure that you use the complete 15 character part number consisting of the 12 character base part number and the additional characters for options. Add "-G" to the model number for 6/6 RoHS compliance.

Model Number	Input Voltage	Output Voltage	Max Output Current
BQ55090QEw60xyz-G	35-55V	9.6V	60A

The following options must be included in place of the **wxyz** spaces in the model numbers listed above.

Options Description: wxyz			
Thermal Design	Enable Logic	Pin Style	Feature Set
A - Open Frame B - Baseplated	N - Negative P - Positive	K - 0.110" N - 0.145" R - 0.180" Y - 0.250"	S - Standard
