

54AC11074, 74AC11074
DUAL D-TYPE POSITIVE-EDGE-TRIGGERED FLIP-FLOPS
WITH CLEAR AND PRESET

D2957, DECEMBER 1986 - REVISED APRIL 1993

- Flow-Through Architecture Optimizes PCB Layout
- Center-Pin V_{CC} and GND Configurations Minimize High-Speed Switching Noise
- EPIC™ (Enhanced-Performance Implanted CMOS) 1-µm Process
- 500-mA Typical Latch-Up Immunity at 125°C
- Package Options Include Plastic Small-Outline Packages, Plastic Thin Shrink Small-Outline Packages, Ceramic Chip Carriers, and Standard Plastic and Ceramic 300-mil DIPs

description

These devices contain two independent D-type positive-edge-triggered flip-flops. A low level at the Preset or Clear input sets or resets the outputs regardless of the levels of the other inputs. When Preset and Clear are inactive (high), data at the D input that meets the setup time requirements are transferred to the outputs on the low-to-high transition of the clock pulse. Clock triggering occurs at a voltage level and is not directly related to the rise time of the clock pulse. Following the hold time interval, data at the D input may be changed without affecting the levels at the outputs.

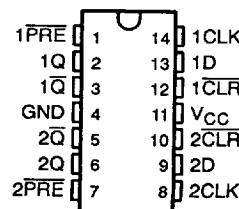

The 54AC11074 is characterized for operation over the full military temperature range of -55°C to 125°C. The 74AC11074 is characterized for operation from -40°C to 85°C.

FUNCTION TABLE

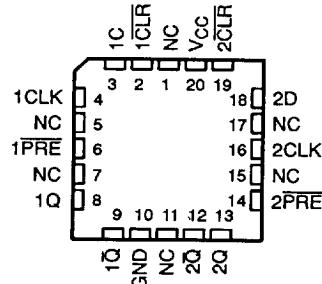

| INPUTS | | | OUTPUTS | | |
|--------|-----|-----|---------|----------------|-------------|
| PRE | CLR | CLK | D | Q | \bar{Q} |
| L | H | X | X | H | L |
| H | L | X | X | L | H |
| L | L | X | X | H† | H† |
| H | H | † | H | H | L |
| H | H | † | L | L | H |
| H | H | L | X | Q ₀ | \bar{Q}_0 |

† This configuration is nonstable; that is, it will not persist when either Preset or Clear returns to its inactive (high level).

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

| | | | | |
|---|-------|--|--|-----------------------------------|
| Supply voltage range, V _{CC} | | | | -0.5 V to 7 V |
| Input voltage range, V _I (see Note 1) | | | | -0.5 V to V _{CC} + 0.5 V |
| Output voltage range, V _O (see Note 1) | | | | -0.5 V to V _{CC} + 0.5 V |
| Input clamp current, I _{IK} (V _I < 0 or V _I > V _{CC}) | | | | ±20 mA |
| Output clamp current, I _{OK} (V _O < 0 or V _O > V _{CC}) | | | | ±50 mA |
| Continuous output current, I _O (V _O = 0 to V _{CC}) | | | | ±50 mA |
| Continuous current through V _{CC} or GND | | | | ±100 mA |
| Storage temperature range | | | | -65°C to 150°C |

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

PARAMETER MEASUREMENT INFORMATION

NOTES: A. C_L includes probe and jig capacitance.
 B. All input pulses are supplied by generators having the following characteristics: PRR \leq 10 MHz, $Z_O = 50 \Omega$, $t_r = 3$ ns, $t_f = 3$ ns.
 C. The outputs are measured one at a time with one input transition per measurement.
