

LINEAR INTEGRATED CIRCUITS

PRELIMINARY DATA

OPERATIONAL AMPLIFIERS

The LS 709 series features low offset, high input impedance, large input common mode range, high output voltage swing. The amplifier is intended for use in D.C. servosystems, high impedance analog computer, low level instrumentation applications, and for the generation of special linear and non linear transfer functions.

ABSOLUTE MAXIMUM RATINGS

		TO-99	DIP
V_s	Supply voltage	± 18 V	
$V_i(1)$	Input voltage	± 10 V	
ΔV_i	Differential input voltage	± 5 V	
T_{op}	Operating temperature for LS 709/LS 709A for LS 709C	-55 to 125 °C 0 to 70 °C	
	Output short circuit duration (2)	5 s	
P_{tot}	Power dissipation at $T_{amb} = 70$ °C	520 mW	400 mW
T_{stg}	Storage temperature	-65 to 150 °C	-55 to 150 °C
	Lead soldering temperature	300 °C (10 s)	260 °C (12 s)

- 1) For supply voltages less than ± 10 V maximum input voltage is equal to the supply voltage
- 2) The short circuit duration is limited by thermal dissipation
