ATSTK594

Description:

Atmel offers a very low-cost development kit for the AVR designer who wishes to begin working with the award-winning FPSLIC (AT94K) family of devices. The STK594 kit is an expansion module designed to add FPSLIC support to the Atmel STK500 Development Board. The kit allows designers to design, simulate, synthesize and program Atmel's FPSLIC devices. The STK594 includes hardware allowing full support for the new features found on the FPSLIC devices.

Ordering Code: ATSTK594
