

## 1. Overview

### 1.1 Features

The R8C/M13B Group of single-chip microcontrollers (MCUs) incorporates the R8C CPU core, which provides sophisticated instructions for a high level of efficiency. With 1 Mbyte of address space, the CPU core is capable of executing instructions at high speed. In addition, it features a multiplier for high-speed arithmetic processing.

Power consumption is low, and the supported operating modes allow additional power control. These MCUs are designed to maximize EMI/EMS performance.

Integration of many peripheral functions on the same chip, including multifunction timer and serial interface, reduces the number of system components.

The R8C/M13B Group includes data flash (1 KB × 2 blocks).

#### 1.1.1 Applications

Home appliances, office equipment, audio equipment, consumer products, etc.

## 1.1.2 Specifications

Tables 1.1 and 1.2 outline the Specifications.

**Table 1.1 Specifications (1)**

Item	Function	Description
CPU	Central processing unit	R8C CPU core <ul style="list-style-type: none"> <li>• Number of fundamental instructions: 89</li> <li>• Minimum instruction execution time:               <ul style="list-style-type: none"> <li>50 ns (<math>f(XIN) = 20</math> MHz, <math>VCC = 2.7</math> V to 5.5 V)</li> <li>200 ns (<math>f(XIN) = 5</math> MHz, <math>VCC = 1.8</math> V to 5.5 V)</li> </ul> </li> <li>• Multiplier: 16 bits <math>\times</math> 16 bits <math>\rightarrow</math> 32 bits</li> <li>• Multiply-accumulate instruction: 16 bits <math>\times</math> 16 bits + 32 bits <math>\rightarrow</math> 32 bits</li> <li>• Operating mode: Single-chip mode (address space: 1 Mbyte)</li> </ul>
Memory	ROM, RAM, data flash	See <b>Table 1.3 Product List</b> .
Reset sources		<ul style="list-style-type: none"> <li>• Hardware reset by <math>\overline{RESET}</math></li> <li>• Power-on reset</li> <li>• Watchdog timer reset</li> <li>• Software reset</li> <li>• Reset by voltage detection 0</li> </ul>
Voltage detection	Voltage detection circuit	Voltage detection with two check points: Voltage detection 0, voltage detection 1 (detection levels selectable)
Watchdog timer		<ul style="list-style-type: none"> <li>• 14 bits <math>\times</math> 1 (with prescaler)</li> <li>• Reset start function selectable</li> <li>• Count source protection function selectable</li> <li>• Periodic timer function selectable</li> </ul>
Clock	Clock generation circuits	<ul style="list-style-type: none"> <li>• 4 circuits: XIN clock oscillation circuit, XCIN clock oscillation circuit, high-speed on-chip oscillator (with frequency adjustment function), low-speed on-chip oscillator</li> <li>• Oscillation stop detection: XIN clock oscillation stop detection function</li> <li>• Clock frequency divider circuit integrated</li> </ul>
Power control		<ul style="list-style-type: none"> <li>• Standard operating mode</li> <li>• Wait mode (CPU stopped, peripheral functions in operation)</li> <li>• Stop mode (CPU and peripheral functions stopped)</li> </ul>
Interrupts		<ul style="list-style-type: none"> <li>• Number of interrupt vectors: 69</li> <li>• External interrupt inputs: 8 (<math>\overline{INT} \times 4</math>, key input <math>\times 4</math>)</li> <li>• Priority levels: 2</li> </ul>
I/O ports	Programmable I/O ports	<ul style="list-style-type: none"> <li>• CMOS I/O: 29 (pull-up resistor selectable)</li> <li>• High-current drive ports: 8</li> </ul>
Timer	Timer RJ2	16 bits $\times$ 1 Timer mode, pulse output mode (output level inverted every period), event counter mode, pulse width measurement mode, pulse period measurement mode
	Timer RB2	8 bits $\times$ 1 (with 8-bit prescaler) or 16 bits $\times$ 1 (selectable) Timer mode, programmable waveform generation mode (PWM output), programmable one-shot generation mode, programmable wait one-shot generation mode
	Timer RC	16 bits $\times$ 1 (with 4 capture/compare registers) Timer mode (output compare function, input capture function), PWM mode (3 outputs), PWM2 mode (1 PWM output)
	Timer RK	8 bits $\times$ 1 Interval mode, pulse output mode, output compare mode
	Timer RE2	8 bits $\times$ 1 Real-time clock mode, compare match timer mode
Serial interface	UART0	Clock synchronous serial I/O. Also used for asynchronous serial I/O.
	UART1	
Clock synchronous serial interface		<ul style="list-style-type: none"> <li>• Synchronous serial communication unit (SSU) <math>\times</math> 1 channel</li> <li>• I<sup>2</sup>C bus interface <math>\times</math> 1 channel</li> </ul>

**Table 1.2 Specifications (2)**

Item	Function	Description
IrDA interface		1 channel (UART0 and UART1 can be switched)
A/D converter		<ul style="list-style-type: none"> <li>Resolution: 10 bits × 8 channels</li> <li>Sample and hold function, sweep mode</li> </ul>
Comparator B		2 circuits
Flash memory		<ul style="list-style-type: none"> <li>Program/erase voltage for program ROM: VCC = 1.8 V to 5.5 V</li> <li>Program/erase voltage for data flash: VCC = 1.8 V to 5.5 V</li> <li>Program/erase endurance: 10,000 times (data flash) 10,000 times (program ROM)</li> <li>Program security: ID code check, protection enabled by lock bit</li> <li>Debug functions: On-chip debug, on-board flash rewrite function</li> </ul>
Operating frequency/ Power supply voltage		f(XIN) = 20 MHz (VCC = 2.7 V to 5.5 V) f(XIN) = 5 MHz (VCC = 1.8 V to 5.5 V)
Temperature range		-20 °C to 85 °C (N version) -40 °C to 85 °C (D version) <sup>(1)</sup>
Package		32-pin LQFP: [Package code] PLQP0032GB-A

Note:

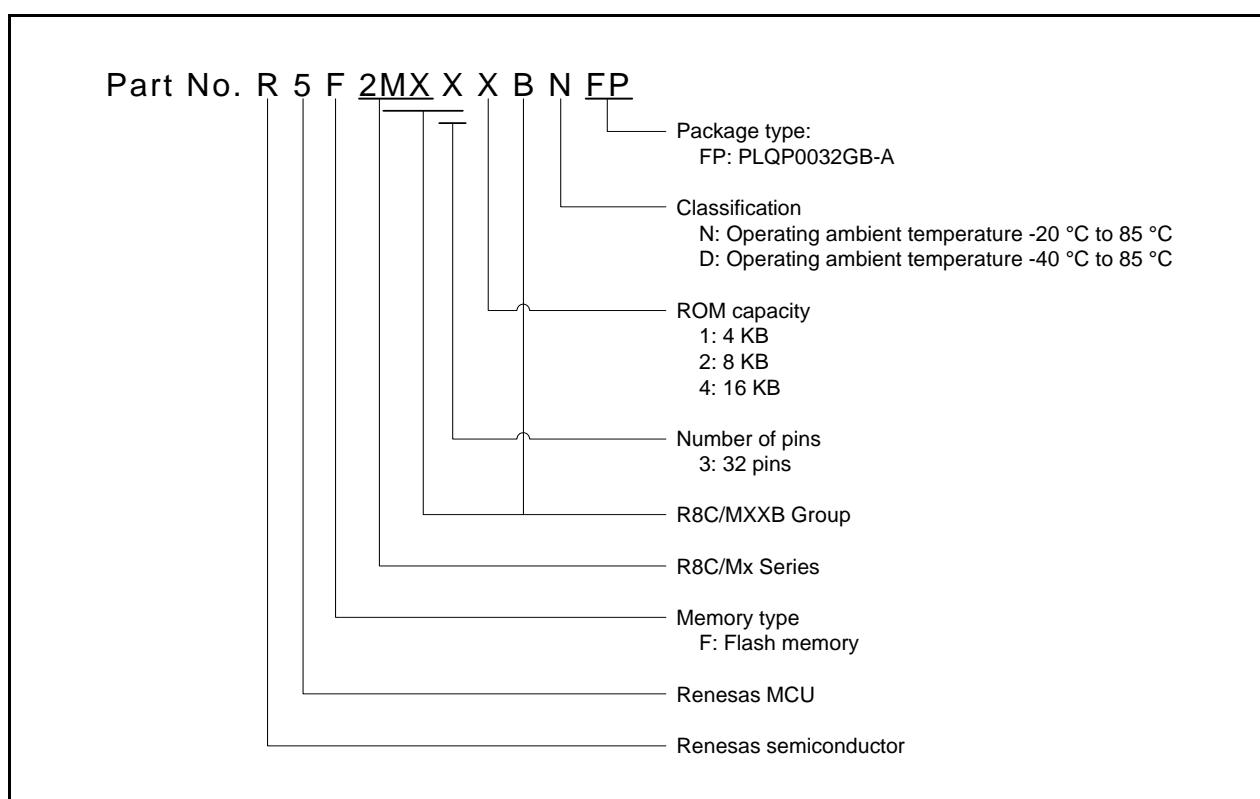

1. Specify the D version if its functions are to be used.

## 1.2 Product List

Table 1.3 lists the Product List. Figure 1.1 shows the Product Part Number Structure.

**Table 1.3 Product List** **Current of Mar 2012**

Part No.	Internal ROM Capacity		Internal RAM Capacity	Package Type	Remarks
	Program ROM	Data Flash			
R5F2M131BNFP	4 Kbytes	1 Kbyte × 2	384 bytes	PLQP0032GB-A	N version
R5F2M132BNFP	8 Kbytes	1 Kbyte × 2	512 bytes		
R5F2M134BNFP	16 Kbytes	1 Kbyte × 2	1 Kbyte		
R5F2M131BDFP	4 Kbytes	1 Kbyte × 2	384 bytes		D version
R5F2M132BDFP	8 Kbytes	1 Kbyte × 2	512 bytes		
R5F2M134BDFP	16 Kbytes	1 Kbyte × 2	1 Kbyte

22		P1_2	$\overline{KI2}$	TRCIOB/TREO					AN2
23		P1_1	$\overline{KI1}$	TRCIOA/TRCTRG					AN1
24		P1_0	$\overline{KI0}$	TRCIOD/TRKI					AN0
25		P0_7		TRCIOC/TRKO					
26		P0_6		TRCIOD					
27		P0_5		TRCIOB					
28		P0_4		TRCIOB/TREO					
29		P0_3		TRCIOB	CLK1				
30		P0_2		TRCIOA/TRCTRG	RXD1	IrRXD			
31		P0_1		TRCIOA/TRCTRG	TXD1	IrTXD			
32		P0_0		TRCIOA/TRCTRG					

## 1.5 Pin Functions

Tables 1.5 and 1.6 list Pin Functions.

**Table 1.5 Pin Functions (1)**

Item	Pin Name	I/O	Description
Power supply input	VCC, VSS	—	Apply 1.8 V through 5.5 V to the VCC pin. Apply 0 V to the VSS pin.
Analog power supply input	AVCC, AVSS	—	Power supply input for the A/D converter. Connect a capacitor between pins AVCC and AVSS.
Reset input	$\overline{\text{RESET}}$	I	Applying a low level to this pin resets the MCU.
MODE	MODE	I	Connect this pin to the VCC pin via a resistor.
XIN clock input	XIN	I	I/O for the XIN clock generation circuit.
XIN clock output	XOUT	O	Connect a ceramic resonator or a crystal oscillator between pins XIN and XOUT. <sup>(1)</sup> To use an external clock, input it to the XIN pin. P4_5 can be used as an I/O port at this time.
XCIN clock input	XCIN	I	I/O for the XCIN clock generation circuit.
XCIN clock output	XCOUT	O	Connect a crystal oscillator between pins XCIN and XCOUT. <sup>(1)</sup> To use an external clock, input it to the XCIN pin. P4_7 can be used as an I/O port at this time.
$\overline{\text{INT}}$ interrupt input	$\overline{\text{INT0}}$ to $\overline{\text{INT3}}$	I	$\overline{\text{INT}}$ interrupt input.
Key input interrupt	$\overline{\text{KI0}}$ to $\overline{\text{KI3}}$	I	Key input interrupt input.
I/O ports	P0_0 to P0_7, P1_0 to P1_7, P2_0 to P2_2, P3_1, P3_3 to P3_5, P3_7, P4_2, P4_5 to P4_7, PA_0	I/O	CMOS I/O ports. Each port has an I/O select direction register, enabling switching input and output for each port. For input ports other than PA_0, the presence or absence of a pull-up resistor can be selected by a program. P1_2 to P1_5, P3_3 to P3_5, and P3_7 can be used as LED drive ports.
Timer RJ2	TRJIO	I/O	Timer RJ2 I/O.
	TRJO	O	Timer RJ2 output.
Timer RB2	TRBO	O	Timer RB2 output.
Timer RC	TRCCLK	I	External clock input.
	TRCTRG	I	External trigger input.
	TRCIOA, TRCIOB, TRCIOC, TRCIOD	I/O	Timer RC I/O.
Timer RK	TRKI	I	Timer RK external input.
	TRKO	O	Timer RK output.
Timer RE2	TREO	O	Timer RE2 output.
Serial interface	CLK0, CLK1	I/O	Transfer clock I/O.
	RXD0, RXD1	I	Serial data input.
	TXD0, TXD1	O	Serial data output.
Synchronous serial communication unit (SSU)	SSI	I/O	Data I/O.
	$\overline{\text{SCS}}$	I/O	Chip-select signal I/O.
	SSO	I/O	Data I/O.
	SSCK	I/O	Clock I/O.
I <sup>2</sup> C bus interface	SDA	I/O	Data I/O.
	SCL	I/O	Clock I/O.
IrDA Interface	IrRXD	I	Data input.
	IrTXD	O	Data output.
A/D converter	AN0 to AN7	I	Analog input for the A/D converter.
	$\overline{\text{ADTRG}}$	I	External trigger input for the A/D converter.

Note:

- Contact the oscillator manufacturer for oscillation characteristics.

**Table 1.6 Pin Functions (2)**

Item	Pin Name	I/O	Description
Comparator B	IVCMP1, IVCMP3	I	Analog voltage input for comparator B.
	IVREF1, IVREF3	I	Reference voltage input for comparator B.
	VCOUT1, VCOUT3	O	Comparison result output for comparator B.

## 2. Central Processing Unit (CPU)

Figure 2.1 shows the 13 CPU Registers. The registers, R0, R1, R2, R3, A0, A1, and FB form a single register bank. The CPU has two register banks.

Figure 2.1 CPU Registers

## 2.1 Data Registers (R0, R1, R2, and R3)

R0 is a 16-bit register for transfer, arithmetic, and logic operations. The same applies to R1 through R3.

R0 can be split into high-order (R0H) and low-order (R0L) registers to be used separately as 8-bit data registers. The same applies to R1H and R1L. R2 can be combined with R0 and used as a 32-bit data register (R2R0). In the same way as with R0 and R2, R3 and R1 can be used as a 32-bit data register (R3R1).

## 2.2 Address Registers (A0 and A1)

A0 is a 16-bit register for address register indirect addressing and address register relative addressing. It is also used for transfer, arithmetic, and logic operations. A1 functions in the same manner as A0. A1 can be combined with A0 and used as a 32-bit address register (A1A0).

## 2.3 Frame Base Register (FB)

FB is a 16-bit register used for FB relative addressing.

## 2.4 Interrupt Table Register (INTB)

INTB is a 20-bit register that indicates the start address of a relocatable interrupt vector table.

## 2.5 Program Counter (PC)

PC is a 20-bit register that indicates the address of the next instruction to be executed.

## 2.6 User Stack Pointer (USP) and Interrupt Stack Pointer (ISP)

The stack pointers (SP), USP and ISP, are each 16 bits wide. The U flag of the FLG register is used to switch between USP and ISP.

## 2.7 Static Base Register (SB)

SB is a 16-bit register used for SB relative addressing.

## 2.8 Flag Register (FLG)

FLG is an 11-bit register that indicates the CPU state.

### 2.8.1 Carry Flag (C)

The C flag retains carry, borrow, or shift-out bits that have been generated in the arithmetic and logic unit.

### 2.8.2 Debug Flag (D)

The D flag is for debugging only. It must only be set to 0.

### 2.8.3 Zero Flag (Z)

The Z flag is set to 1 when an arithmetic operation results in 0. Otherwise it is set to 0.

### 2.8.4 Sign Flag (S)

The S flag is set to 1 when an arithmetic operation results in a negative value. Otherwise it is set to 0.

### 2.8.5 Register Bank Select Flag (B)

Register bank 0 is selected when the B flag is 0. Register bank 1 is selected when this flag is 1.

### 2.8.6 Overflow Flag (O)

The O flag is set to 1 when an operation results in an overflow. Otherwise it is set to 0.

### **2.8.7 Interrupt Enable Flag (I)**

The I flag enables maskable interrupts. Interrupts are disabled when the I flag is 0, and are enabled when the I flag is 1. The I flag is set to 0 when an interrupt request is acknowledged.

### **2.8.8 Stack Pointer Select Flag (U)**

ISP is selected when the U flag is 0. USP is selected when the U flag is 1. The U flag is set to 0 when a hardware interrupt request is acknowledged or the INT instruction for a software interrupt numbered from 0 to 31 is executed.

### **2.8.9 Processor Interrupt Priority Level (IPL)**

IPL is 3 bits wide and assigns eight processor interrupt priority levels from 0 to 7. If a requested interrupt has higher priority than IPL, the interrupt is enabled. If IPL is set to levels from 2 to 7, all maskable interrupt requests are disabled.

### **2.8.10 Reserved Bit**

The write value must be 0. The read value is undefined.

## 3. Address Space

### 3.1 Memory Map

Figure 3.1 shows the Memory Map. The R8C/M13B Group have a 1-Mbyte address space from addresses 00000h to FFFFFh. The internal ROM (program ROM) is allocated at lower addresses, beginning with address 0FFFFh. For example, an 8-Kbyte internal ROM area is allocated at addresses 0E000h to 0FFFFh.

The fixed interrupt vector table is allocated at addresses 0FFDCh to 0FFFFh. The start address of each interrupt routine is stored here.

The internal ROM (data flash) is allocated at addresses 03000h to 037FFh.

The internal RAM is allocated at higher addresses, beginning with address 00400h. For example, a 512-byte internal RAM area is allocated at addresses 00400h to 005FFh. The internal RAM is used not only for data storage but also as a stack area when a subroutine is called or when an interrupt request is acknowledged.

Special function registers (SFRs) are allocated at addresses 00000h to 002FFh. Peripheral function control registers are allocated here. All unallocated spaces within the SFRs are reserved and cannot be accessed by users.

Figure 3.1 Memory Map

### 3.2 Special Function Registers (SFRs)

An SFR (special function register) is a control register for a peripheral function. Tables 3.1 to 3.8 list the SFR Information. Table 3.9 lists the ID Code Area and Option Function Select Area.

**Table 3.1 SFR Information (1) (1)**

**Table 3.9 ID Code Area and Option Function Select Area**

Address	Area Name	Symbol	After Reset
0FFDBh	Option Function Select Register 2	OFS2	(Note 1)
0FFDFh	ID1		(Note 2)
0FFE3h	ID2		(Note 2)
0FFEBh	ID3		(Note 2)
0FFEFh	ID4		(Note 2)
0FFF3h	ID5		(Note 2)
0FFF7h	ID6		(Note 2)
0FFFBh	ID7		(Note 2)
0FFFFh	Option Function Select Register	OFS	(Note 1)

## Notes:

- The option function select area is allocated in the flash memory, not in the SFRs. Set appropriate values as ROM data by a program. Do not perform an additional write to the option function select area. Erasure of the block including the option function select area causes the option function select area to be set to FFh.  
When blank products are shipped, the option function select area is set to FFh. It is set to the written value after written by the user.  
When factory-programming products are shipped, the value of the option function select area is the value programmed by the user.
- The ID code area is allocated in the flash memory, not in the SFRs. Set appropriate values as ROM data by a program. Do not perform an additional write to the ID code area. Erasure of the block including the ID code area causes the ID code area to be set to FFh. When blank products are shipped, the ID code areas are set to FFh. They are set to the written value after written by the user.  
When factory-programming products are shipped, the value of the ID code areas is the value programmed by the user.

## 4. Electrical Characteristics

**Table 4.1 Absolute Maximum Ratings**

Symbol	Parameter		Condition	Rated Value	Unit
V <sub>CC</sub> /AV <sub>CC</sub>	Power supply voltage			-0.3 to 6.5	V
V <sub>i</sub>	Input voltage	XIN	XIN-XOUT oscillation on (oscillation circuit used) <sup>(1)</sup>	-0.3 to 1.9	V
			XIN-XOUT oscillation off (oscillation circuit not used) <sup>(1)</sup>	-0.3 to V <sub>CC</sub> + 0.3	V
		Other pins		-0.3 to V <sub>CC</sub> + 0.3	V
V <sub>o</sub>	Output voltage	XOUT	XIN-XOUT oscillation on (oscillation circuit used) <sup>(1)</sup>	-0.3 to 1.9	V
			XIN-XOUT oscillation off (oscillation circuit not used) <sup>(1)</sup>	-0.3 to V <sub>CC</sub> + 0.3	V
		Other pins		-0.3 to V <sub>CC</sub> + 0.3	V
P <sub>d</sub>	Power consumption		-40 °C ≤ Topr ≤ 85 °C	500	mW
T <sub>opr</sub>	Operating ambient temperature			-20 to 85 (N version)/ -40 to 85 (D version)	°C
T <sub>stg</sub>	Storage temperature			-60 to 150	°C

Note:

- When the oscillation circuit is used: bits CKPT1 to CKPT0 in the EXCKCR register are set to 11b  
When the oscillation circuit is not used: bits CKPT1 to CKPT0 in the EXCKCR register are set to any value other than 11b

**Table 4.2 Recommended Operating Conditions**

Symbol	Parameter		Condition	Standard			Unit
				Min.	Typ.	Max.	
V <sub>CC</sub> /AV <sub>CC</sub>	Power supply voltage			1.8	—	5.5	V
V <sub>SS</sub> /AV <sub>SS</sub>	Power supply voltage			—	0	—	V
V <sub>IH</sub>	Input high voltage	Other than CMOS input		0.8 V <sub>CC</sub>	—	V <sub>CC</sub>	V
		CMOS input	4.0 V ≤ V <sub>CC</sub> ≤ 5.5 V	0.65 V <sub>CC</sub>	—	V <sub>CC</sub>	V
			2.7 V ≤ V <sub>CC</sub> < 4.0 V	0.7 V <sub>CC</sub>	—	V <sub>CC</sub>	V
			1.8 V ≤ V <sub>CC</sub> < 2.7 V	0.8 V <sub>CC</sub>	—	V <sub>CC</sub>	V
V <sub>IL</sub>	Input low voltage	Other than CMOS input		0	—	0.2 V <sub>CC</sub>	V
		CMOS input	4.0 V ≤ V <sub>CC</sub> ≤ 5.5 V	0	—	0.4 V <sub>CC</sub>	V
			2.7 V ≤ V <sub>CC</sub> < 4.0 V	0	—	0.3 V <sub>CC</sub>	V
			1.8 V ≤ V <sub>CC</sub> < 2.7 V	0	—	0.2 V <sub>CC</sub>	V
I <sub>OH(sum)</sub>	Peak sum output high current	Sum of all pins I <sub>OH(peak)</sub>		—	—	-160	mA
I <sub>OH(sum)</sub>	Average sum output high current	Sum of all pins I <sub>OH(avg)</sub>		—	—	-80	mA
I <sub>OH(peak)</sub>	Peak output high current		When drive capacity is low	—	—	-10	mA
			When drive capacity is high <sup>(5)</sup>	—	—	-40	mA
I <sub>OH(avg)</sub>	Average output high current		When drive capacity is low	—	—	-5	mA
			When drive capacity is high <sup>(5)</sup>	—	—	-20	mA
I <sub>OL(sum)</sub>	Peak sum output low current	Sum of all pins I <sub>OL(peak)</sub>		—	—	160	mA
I <sub>OL(sum)</sub>	Average sum output low current	Sum of all pins I <sub>OL(avg)</sub>		—	—	80	mA
I <sub>OL(peak)</sub>	Peak output low current		When drive capacity is low	—	—	10	mA
			When drive capacity is high <sup>(5)</sup>	—	—	40	mA
I <sub>OL(avg)</sub>	Average output low current		When drive capacity is low	—	—	5	mA
			When drive capacity is high <sup>(5)</sup>	—	—	20	mA
f <sub>(XIN)</sub>	XIN oscillation frequency		2.7 V ≤ V <sub>CC</sub> ≤ 5.5 V	2	—	20	MHz
			1.8 V ≤ V <sub>CC</sub> < 2.7 V	2	—	5	MHz
	XIN clock input oscillation frequency		2.7 V ≤ V <sub>CC</sub> ≤ 5.5 V	0	—	20	MHz
			1.8 V ≤ V <sub>CC</sub> < 2.7 V	0	—	5	MHz
f <sub>(XCIN)</sub>	XCIN clock input oscillation frequency		1.8 V ≤ V <sub>CC</sub> ≤ 5.5 V	—	32.768	—	kHz
f <sub>HOCO</sub>	High-speed on-chip oscillator oscillation frequency <sup>(3)</sup>		1.8 V ≤ V <sub>CC</sub> ≤ 5.5 V	—	20	—	MHz
f <sub>LOCO</sub>	Low-speed on-chip oscillator oscillation frequency <sup>(4)</sup>		1.8 V ≤ V <sub>CC</sub> ≤ 5.5 V	—	125	—	kHz
—	System clock frequency		2.7 V ≤ V <sub>CC</sub> ≤ 5.5 V	—	—	20	MHz
			1.8 V ≤ V <sub>CC</sub> < 2.7 V	—	—	5	MHz
f <sub>s</sub>	CPU clock frequency		2.7 V ≤ V <sub>CC</sub> ≤ 5.5 V	0	—	20	MHz
			1.8 V ≤ V <sub>CC</sub> < 2.7 V	0	—	5	MHz

## Notes:

1. V<sub>CC</sub> = 1.8 V to 5.5 V and T<sub>opr</sub> = -20 °C to 85 °C (N version)/-40 °C to 85 °C (D version), unless otherwise specified.
2. The average output current indicates the average value of current measured during 100 ms.
3. For details, see **Table 4.10 High-Speed On-Chip Oscillator Circuit Electrical Characteristics**.
4. For details, see **Table 4.11 Low-Speed On-Chip Oscillator Circuit Electrical Characteristics**.
5. The pins with high drive capacity are P1\_2, P1\_3, P1\_4, P1\_5, P3\_3, P3\_4, P3\_5, and P3\_7.

Figure 4.1 Ports P0 to P4 Timing Measurement Circuit

## Notes:

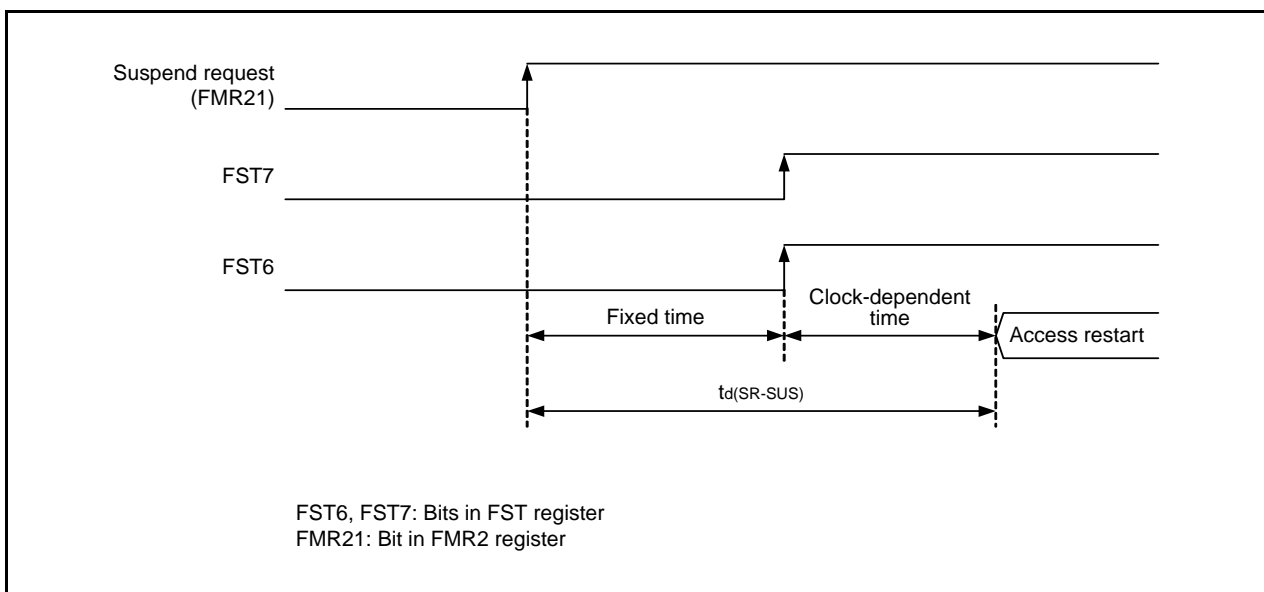

- V<sub>cc</sub> = 2.7 V to 5.5 V and T<sub>opr</sub> = 0 °C to 60 °C, unless otherwise specified.
- Definition of program/erase endurance  
The number of program/erase cycles is defined on a per-block basis.  
If the number of cycles is 10,000, each block can be erased 10,000 times.  
For example, if 1,024 cycles of 1-byte-write are performed to different addresses in 1 Kbyte of block A, and then the block is erased, the number of cycles is counted as one. Note, however, that the same address must not be programmed more than once before completion of an erase (overwriting prohibited).
- This indicates the number of times up to which all electrical characteristics can be guaranteed after the last programming/erase operation. Operation is guaranteed for any number of operations in the range of 1 to the specified minimum (Min).
- In a system that executes multiple programming operations, the actual erase count can be reduced by shifting the write addresses in sequence and programming so that as much of the flash memory as possible is used before performing an erase operation. For example, when programming in 16-byte units, the effective number of rewrites can be minimized by programming up to 128 units before erasing them all in one operation. It is also advisable to retain data on the number of erase operations for each block and establish a limit for the number of erase operations performed.
- If an error occurs during a block erase, execute a clear status register command and then a block erase command at least three times until the erase error does not occur.
- For information on the program/erase failure rate, contact a Renesas technical support representative.
- The data hold time includes the time that the power supply is off and the time the clock is not supplied.

**Table 4.6 Flash Memory (Blocks A and B of Data Flash) Electrical Characteristics**

	Voltage detection level Vdet1_5 <sup>(2)</sup>	When Vcc decreases	2.75	2.95	3.15	V
	Voltage detection level Vdet1_7 <sup>(2)</sup>	When Vcc decreases	3.00	3.25	3.55	V
	Voltage detection level Vdet1_9 <sup>(2)</sup>	When Vcc decreases	3.30	3.55	3.85	V
	Voltage detection level Vdet1_B <sup>(2)</sup>	When Vcc decreases	3.60	3.85	4.15	V
	Voltage detection level Vdet1_D <sup>(2)</sup>	When Vcc decreases	3.90	4.15	4.45	V
	Voltage detection level Vdet1_F <sup>(2)</sup>	When Vcc decreases	4.20	4.45	4.75	V
—	Hysteresis width at the rising of Vcc in voltage detection 1 circuit	Vdet1_1 to Vdet1_5 selected	—	0.07	—	V
		Vdet1_7 to Vdet1_F selected	—	0.10	—	V
—	Voltage detection 1 circuit response time <sup>(3)</sup>	When Vcc decreases from 5 V to (Vdet1_0 - 0.1) V	—	60	150	μs
—	Self power consumption in voltage detection circuit	VC1E = 1, Vcc = 5.0 V	—	1.7	—	μA
td(E-A)	Wait time until voltage detection circuit operation starts <sup>(4)</sup>		—	—	100	μs

Notes:

1. The measurement condition is Vcc = 1.8 V to 5.5 V and Topr = -20 °C to 85 °C (N version)/-40 °C to 85 °C (D version).
2. Select the voltage detection level with bits VD1S1 to VD1S3 in the VD1LS register.
3. The response time is from when the voltage passes Vdet1 until the voltage monitor 1 interrupt request is generated.
4. The wait time is necessary for the voltage detection circuit to operate when the VC1E bit in the VCA2 register is set to 0 and then 1.

**Table 4.9 Power-On Reset Circuit (2)**

Symbol	Parameter	Condition	Standard			Unit
			Min.	Typ.	Max.	
$t_{rth}$	External power Vcc rise gradient		0	—	50,000	mV/msec

Notes:

1. The measurement condition is  $T_{opr} = -20\text{ }^{\circ}\text{C}$  to  $85\text{ }^{\circ}\text{C}$  (N version)/ $-40\text{ }^{\circ}\text{C}$  to  $85\text{ }^{\circ}\text{C}$  (D version), unless otherwise specified.
2. To use the power-on reset function, enable the voltage monitor 0 reset by setting the LVDAS bit in the OFS register to 0.

**Figure 4.3 Power-On Reset Circuit Electrical Characteristics**

**Table 4.10 High-Speed On-Chip Oscillator Circuit Electrical Characteristics**

Symbol	Parameter	Condition	Standard			Unit
			Min.	Typ.	Max.	
—	High-speed on-chip oscillator frequency after reset is cleared	$V_{CC} = 1.8 \text{ V to } 5.5 \text{ V}, -20 \text{ }^\circ\text{C} \leq T_{opr} \leq 85 \text{ }^\circ\text{C}$	19.2	20.0	20.8	MHz
		$V_{CC} = 1.8 \text{ V to } 5.5 \text{ V}, -40 \text{ }^\circ\text{C} \leq T_{opr} \leq 85 \text{ }^\circ\text{C}$	19.0	20.0	21.0	MHz
—	High-speed on-chip oscillator frequency when the FR18S0 register adjustment value is written into the FRV1 register and the FR18S1 register adjustment value into the FRV2 register <sup>(2)</sup>	$V_{CC} = 1.8 \text{ V to } 5.5 \text{ V}, -20 \text{ }^\circ\text{C} \leq T_{opr} \leq 85 \text{ }^\circ\text{C}$	17.694	18.432	19.169	MHz
		$V_{CC} = 1.8 \text{ V to } 5.5 \text{ V}, -40 \text{ }^\circ\text{C} \leq T_{opr} \leq 85 \text{ }^\circ\text{C}$	17.510	18.432	19.353	MHz
—	Oscillation stabilization time		—	—	30	$\mu\text{s}$
—	Self power consumption at oscillation	$V_{CC} = 5.0 \text{ V}, T_{opr} = 25 \text{ }^\circ\text{C}$	—	530	—	$\mu\text{A}$

Notes:

- $V_{CC} = 1.8 \text{ V to } 5.5 \text{ V}, T_{opr} = -20 \text{ }^\circ\text{C to } 85 \text{ }^\circ\text{C}$  (N version)/ $-40 \text{ }^\circ\text{C to } 85 \text{ }^\circ\text{C}$  (D version), unless otherwise specified.
- This enables the setting errors of bit rates such as 9600 bps and 38400 bps to be 0% when the serial interface is used in UART mode.

**Table 4.11 Low-Speed On-Chip Oscillator Circuit Electrical Characteristics**

Symbol	Parameter	Condition	Standard			Unit
			Min.	Typ.	Max.	
fLCO	Low-speed on-chip oscillator frequency		60	125	250	kHz
—	Oscillation stabilization time		—	—	35	$\mu\text{s}$
—	Self power consumption at oscillation	$V_{CC} = 5.0 \text{ V}, T_{opr} = 25 \text{ }^\circ\text{C}$	—	2	—	$\mu\text{A}$

Note:

- $V_{CC} = 1.8 \text{ V to } 5.5 \text{ V}, T_{opr} = -20 \text{ }^\circ\text{C to } 85 \text{ }^\circ\text{C}$  (N version)/ $-40 \text{ }^\circ\text{C to } 85 \text{ }^\circ\text{C}$  (D version), unless otherwise specified.

## General Precautions in the Handling of MPU/MCU Products

The following usage notes are applicable to all MPU/MCU products from Renesas. For detailed usage notes on the products covered by this manual, refer to the relevant sections of the manual. If the descriptions under General Precautions in the Handling of MPU/MCU Products and in the body of the manual differ from each other, the description in the body of the manual takes precedence.

### 1. Handling of Unused Pins

Handle unused pins in accord with the directions given under Handling of Unused Pins in the manual.

- The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible. Unused pins should be handled as described under Handling of Unused Pins in the manual.

### 2. Processing at Power-on

The state of the product is undefined at the moment when power is supplied.

- The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the moment when power is supplied.

In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the moment when power is supplied until the reset process is completed.

In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the moment when power is supplied until the power reaches the level at which resetting has been specified.

### 3. Prohibition of Access to Reserved Addresses

Access to reserved addresses is prohibited.

- The reserved addresses are provided for the possible future expansion of functions. Do not access these addresses; the correct operation of LSI is not guaranteed if they are accessed.

### 4. Clock Signals

After applying a reset, only release the reset line after the operating clock signal has become stable. When switching the clock signal during program execution, wait until the target clock signal has stabilized.

- When the clock signal is generated with an external resonator (or from an external oscillator) during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Moreover, when switching to a clock signal produced with an external resonator (or by an external oscillator) while program execution is in progress, wait until the target clock signal is stable.

### 5. Differences between Products

Before changing from one product to another, i.e. to one with a different part number, confirm that the change will not lead to problems.

- The characteristics of MPU/MCU in the same group but having different part numbers may differ because of the differences in internal memory capacity and layout pattern. When changing to products of different part numbers, implement a system-evaluation test for each of the products.

## Notice

- All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
- Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
- You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
- Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
- When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
- Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
- Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.  
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.  
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.  
"Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
- You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
- Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
- Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
- This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
- Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.  
(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.  
(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
