## MODEL SELECTION

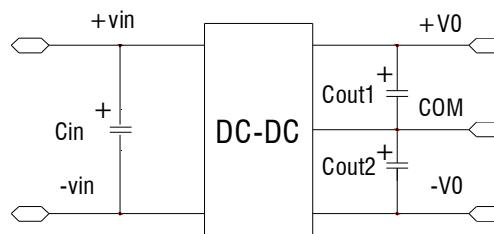

## RECOMMEND CIRCUIT

Single Output:

## RECOMMEND CIRCUIT

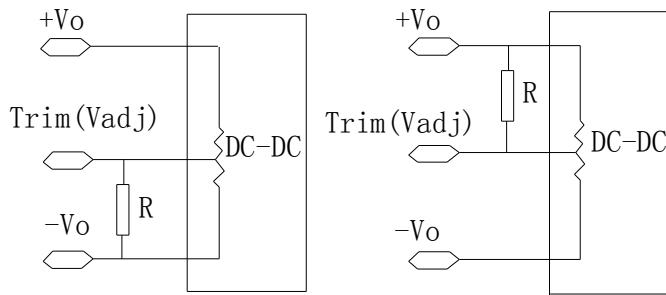

Dual Output:

- Add input capacitance  $C_{in}$  is helpful to improve the electromagnetic compatibility, recommend  $C_{in}$  use 47  $\mu F$ -100 $\mu F$  of the electrolytic capacitors.
- If the module connect to the digital circuits, please add the  $C_{out}$ ,  $C_{out1}$ ,  $C_{out2}$ .
- If  $C_{out}$ ,  $C_{out1}$ ,  $C_{out2}$  value is too high or lower ESR, it will cause the module unstable,
- The recommended value of  $C_{out}$ ,  $C_{out1}$ ,  $C_{out2}$  should be 100  $\mu F/A$ , the current here means the output current.

## Trim application &amp; Trim Resistance

Raise the output Voltage      Down the output voltage

- In dual and triple output modules, this application can just used in the main load(auxiliary road change together with the main load)

## USING ATTENTIONS

- Module will cause irreversible damage when in the state of the input reverse polarity.
- Module will cause irreversible damage when in the long-term overload conditions.
- Module will cause irreversible damage when out of the maximum input voltage range.
