Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

FL73282
Half-Bridge Gate Driver

Features

- Floating Channel for Bootstrap Operation to +900 V
- Typically 350 mA / 650 mA Sourcing/Sinking Current Driving Capability for Both Channels
- Common-Mode dv/dt Noise Canceling Circuit
- Extended Allowable Negative V_S Swing to -9.8 V for Signal Propagation at V_{CC}=V_{BS}=15 V
- V_{CC} & V_{BS} Supply Range from 10 V to 20 V
- UVLO Functions for Both Channels
- Matched Propagation Delay Below 50 ns
- Built-in 170 ns Dead-Time
- Output in Phase with Input Signal

Applications

- Fluorescent Lamp Ballast
- HID Ballast
- SMPS
- Motor Driver
- General Purpose Half Bridge Topology

Description

The FL73282, a monolithic half bridge gate-drive IC, can drive MOSFETs and IGBTs that operate up to +900 V. Fairchild's high-voltage process and common mode noise canceling technique provides stable operation of the high-side driver under high-dV_S/dt noise circumstances. An advanced level-shift circuit allows high-side gate driver operation up to V_S=-9.8 V (typical) for V_{BS}=15 V. The UVLO circuits for both channels prevent malfunction when V_{CC} or V_{BS} is lower than the specified threshold voltage. Output drivers typically source/sink 350 mA / 650 mA, respectively, which is suitable for all kinds of half- and full-bridge inverters.

Absolute Maximum Ratings

Stresses exceeding the Absolute Maximum Ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Notes:

2. Mounted on 76.2 x 114.3 x 1.6 mm PCB (FR-4 glass epoxy material).
3. Refer to the following standards:
   JESD51-2: Integral circuit's thermal test method environmental conditions, natural convection;
   JESD51-3: Low effective thermal conductivity test board for leaded surface-mount packages.
4. Do not exceed maximum power dissipation (P_D) under any circumstances.

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.
