

8-bit Single Chip Microcomputer

- Original Architecture Core CPU
- Large-capacity Font ROM for Kanji, Simplified Chinese and Hangul (896K bytes)
- Dot-matrix LCD Driver (126 × 32)

DESCRIPTION

The S1C88650 is an 8-bit microcomputer for portable equipment with an LCD display that has a built-in LCD controller/driver and a character generator (kanji) ROM. This microcomputer features low-voltage (1.8V) and high-speed (8.2MHz) operations as well as low-current consumption (2.5µA during standby). The LCD controller/driver contains an LCD drive power supply circuit and can drive an maximum of 126 × 32-dot LCD panel in low-power consumption. An 896K-byte large-capacity font ROM is embedded in the S1C88650. This allows applications to contain fonts for Simplified Chinese characters, Hangul characters and user-defined characters as well as 11 × 12-dot JIS level-1, JIS level-2 and other kanji fonts without an external expanded font ROM. This 8-bit CPU has up to 16MB accessible address space allowing easy implementation of a large data processing application. The S1C88650 is suitable for display modules, portable CD/MD, solid audio players, PDA, data bank and other applications that required an exclusive LCD driver in conventional systems.
